Refer to the user documentation that came with your automation system for details.

### Controlling the Display from the Source Location

- 1. Connect the 3.5mm mini-mono end of the IR cable from the **IR IN** port on the matrix to the automation system.
- 2. Connect an IR emitter (Gefen part no. EXT-IREMIT) from the **IR Out** jack on the Receiver unit to IR sensor on the display.

### Controlling the Source from the Viewing Location

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the **IR Ext** port on the Receiver unit.
- Connect an IR emitter (Gefen part no. EXT-IREMIT) from the IR OUT jack on the 16x16 Modular Matrix for HDMI w/ HDCP to the IR sensor on the source device.

### **Controlling Multiple Sources**

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the **IR Ext** port on the Receiver unit.
- Connect an IR emitter (Gefen part no. EXT-IREMIT) to the IR OUT jack on the 16x16 Modular Matrix for HDMI w/ HDCP.
- Another IR emitter can be connected to the IR All Out port, in order to control individual (or multiple) sources that are not controlled using the IR emitter connected to the IR OUT port.

### Controlling the Matrix from the Viewing Location

Routing can be managed from any viewing location, using the included IR remote control unit, regardless of the current routing state of the matrix.

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the **IR Ext** jack on each Receiver unit.
- 2. Connect an IR emitter (Gefen part no. EXT-IREMIT) from the **IR All Out** port on the back of the matrix and place the emitter over the IR sensor on the front panel of the matrix.

### <u>Syntax</u>:

#set edid param1 param2 param3 param4

### Parameters:

param1	
--------	--

Source[STRING]SourceDescriptiondefaultUses default EDIDdynamicUses dynamic EDIDbankUses EDID bankoutputUses EDID on Output (sink)

param2

Source

[0 ... 17]

Source	Description
0	Default EDID
1 8	EDID bank
1 17	Output

param3

#### Target

[STRING]

Target	Description
input	Specifies an input
bank	Specifies an EDID bank

param4

#### Target

[1 ... 8]

Value	Description
1 16	Input
1 8	EDID bank

(continued on next page)

Notes:

If param1 = default or param1 = dynamic, set param2 = 0.

#### Using Dynamic EDID

When *param1* = dynamic, the specified input will be set to *Dynamic EDID*. This can be observed by accessing the Manage EDID tab, in the Web interface. When an input is set to *Dynamic EDID*, the input will use the EDID of the last selected output during the routing process. The order in which outputs are routed are important when using *Dynamic EDID*. See the example below.

#### Examples:

Using Dynamic EDID:

#set\_edid dynamic 0 input 4
COPY DYNAMIC EDID TO INPUT4.

In the example above, Input 4 is set to *Dynamic EDID*. If the following routing command is issued, then the EDID from Output 3 (not Output 2) will be used by Input 1.

r 4 2 3 INPUT 4 IS SET TO OUTPUTS 2, 3

However, if we wanted to use the EDID from Output 2, we would write the command as:

r 4 3 2 INPUT 4 IS SET TO OUTPUTS 3, 2

Since Output 2 was the last output that was specified, this will be the EDID that Input 4 will use.

This second example does not use Dynamic EDID but uses the EDID from the specified downstream sink (display, etc):

#set\_edid output 1 input 3
COPY OUTPUT1 EDID TO INPUT3.

## #set\_ir

The  $\texttt{#set_ir}$  command sets the IR channel for the matrix.

### Password

Enter the password for the associated username. The password can also be set using RS-232 or Telnet. See the <code>#set\_webui\_op\_pass</code> and the <code>#set\_webui\_ad\_pass</code> commands.

The Web GUI is divided into four main pages: **Main**, **I/O Setup**, **Manage EDID**, and **Configuration**. Each main page is represented by a tab at the top-most portion of the screen. The **Main**, **I/O Setup**, and **Manage EDID** pages have their own set of sub-tabs. Click on the desired tab / sub-tab to open the desired page.

**NOTE:** In order to view all four tabs at the top of the screen, the user must be logged in as "Administrator". If logged-in as "Operator", only the **Main** tab will be visible.

## Card Removal and Installation

Although each 16x16 Modular Matrix for HDMI w/ HDCP is sold pre-configured, both input and output cards can be removed or added to fit the needs of the application. Each module can easily be removed and installed without using any special tools.

**WARNING:** Modules are sensitive to Electrostatic Discharge (ESD) which can damage the module. Avoid touching the module contacts or the components on the module. Always hold modules by the edges or by the knobs on the front of the module. Never slide a module over any surface. When installing/replacing modules, do not install an input module in to an output slot or an output module to an input slot. This will damage the matrix and void the warranty.

- 1. Power-off the matrix.
- 2. Turn the matrix around so that you are facing the back of the unit.

**STOP:** Before installing modules and prevent the risk of possible electrical shock, unplug the AC power cord from back of the matrix.

3. Loosen the fastening screws on both sides of the card (or cover plate) to be removed. Each card / cover plate has two fastening screws.

4. Grab the fastening screws on both sides of the card, between the thumb and index finger, and gently pull to remove the card from the matrix. If a cover plate is being removed, then loosen the fastening screws on both sides of the cover plate and gently remove the cover plate.

5. Locate the grooved track on either side of the expansion bay.

6. Carefully position the card between the upper and lower rail on each track.

7. Use both hands to push the card until it snaps in place.

8. Secure the card by hand-tightening the fastening screws. Do not overtighten the screws. To prevent damage to the screws, do not use pliers or other high-torque devices.

## Power Supply Failure and Replacement

## **Power Supply Failure**

The 16x16 Modular Matrix for HDMI w/ HDCP comes with two internal (hot-swappable) power supplies. If one of these power supplies should fail, a high-pitched alarm will sound from the matrix. POWER SUPPLY FAILURE! will appear in the front panel display. The matrix can function with a single power supply. However, the POWER SUPPLY FAILURE! message will be displayed instead of the *home screen*, until the power supply is replaced.

If the Web interface is being used, then the following message will appear on the page:

Configuration		FAILURE: Power Supply Failure!				
fo						
outs			Inputs			
ne	Output	Input #	Name	Туре		

If the matrix is being controlled using RS-232 or Telnet, the POWER SUPPLY FAILURE! message will appear within the terminal application.

## **Power Supply Replacement**

- 1. Press the **Power** button to cancel the alarm. It is not necessary to power-off the matrix when replacing a power supply.
- 2. Locate the release mechanism on the power supply to be removed (the Gefen 32x32 Matrix for HDMI w/ HDCP is shown).

3. Grab the power supply handle and release mechanism between the thumb and index finger and squeeze. The release mechanism will move in an upward direction.

4. Gently pull the power supply as you continue to hold the release mechanism. Once the power supply is released, pull the handle to remove the power supply.

- 5. Gently push the new power supply into place. The power supply will snap into place once it is fully installed.
- 6. Check that power supply is secured by pulling on the handle. The power supply should not move without using the release mechanism.
