

GEF-HDFST-MOD-32432-HD GEF-HDFST-MOD-32432-HDELR

User Manual Release A7

Important Safety Instructions

GENERAL SAFETY INFORMATION

- 1. Read these instructions.
- 2. Keep these instructions.
- 3. Heed all warnings.
- 4. Follow all instructions.
- 5. Do not use this product near water.
- 6. Clean only with a dry cloth.
- 7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8. Do not install or place this product near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11. Only use attachments/accessories specified by the manufacturer.
- 12. To reduce the risk of electric shock and/or damage to this product, never handle or touch this unit or power cord if your hands are wet or damp. Do not expose this product to rain or moisture.
- 13. Unplug this apparatus during lightning storms or when unused for long periods of time.
- 14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
- 15. Batteries that may be included with this product and/or accessories should never be exposed to open flame or excessive heat. Always dispose of used batteries according to the instructions.

RACK MOUNT SAFETY INFORMATION

- a. Maximum recommended ambient temperature: 40 °C (104 °F).
- b. Increase the air flow as needed to maintain the recommended temperature inside the rack.
- c. Do not exceed maximum weight loads for the rack. Install heavier equipment in the lower part of the rack to maintain stability.

Warranty Information

Gefen warrants the equipment it manufactures to be free from defects in material and workmanship.

If equipment fails because of such defects and Gefen is notified within two (2) years from the date of shipment, Gefen will, at its option, repair or replace the equipment, provided that the equipment has not been subjected to mechanical, electrical, or other abuse or modifications. Equipment that fails under conditions other than those covered will be repaired at the current price of parts and labor in effect at the time of repair. Such repairs are warranted for ninety (90) days from the day of reshipment to the Buyer.

This warranty is in lieu of all other warranties expressed or implied, including without limitation, any implied warranty or merchantability or fitness for any particular purpose, all of which are expressly disclaimed.

- 1. Proof of sale may be required in order to claim warranty.
- 2. Customers outside the US are responsible for shipping charges to and from Gefen.
- 3. Copper cables are limited to a 30 day warranty and cables must be in their original condition.

The information in this manual has been carefully checked and is believed to be accurate. However, Gefen assumes no responsibility for any inaccuracies that may be contained in this manual. In no event will Gefen be liable for direct, indirect, special, incidental, or consequential damages resulting from any defect or omission in this manual, even if advised of the possibility of such damages. The technical information contained herein regarding the features and specifications is subject to change without notice.

For the latest warranty coverage information, refer to the Warranty and Return Policy under the Support section of the Gefen Web site at www.gefen.com.

PRODUCT REGISTRATION

Please register your product online by visiting the Register Product page under the Support section of the Gefen Web site.

32x32 Modular Matrix for HDMI w/ HDCP

is a trademark of Gefen, LLC.

Important Notice

Gefen, LLC reserves the right to make changes in the hardware, packaging, and any accompanying documentation without prior written notice.

© 2015 Gefen, LLC. All Rights Reserved. All trademarks are the property of their respective owners.

Operating Notes

- There is no internal scaling in the 32x32 Modular Matrix for HDMI w/ HDCP. All of the attached monitors must be able to display the output resolutions of the source devices. For maximum compatibility it is recommended that only one compatible/ common resolution be used by all of the source devices.
- Routing features can be accessed using RS-232 or IP control. See RS-232 and IP Configuration for more information.
- The 32x32 Modular Matrix for HDMI w/ HDCP provides several different pre-configured packages to suit the needs of your application. This User Manual covers all available configurations. See Pre-Configured Options for information on identifying the type of 32x32 Modular Matrix for HDMI w/ HDCP that was purchased.

IN NO EVENT SHALL THE AUTHOR BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

Features and Packing List

Features

- Supports resolutions up to 1080p Full HD
- HDMI Features Supported
 - HDCP compliant
 - 12-bit Deep Color
 - ► LPCM 7.1, Dolby® TrueHD, Dolby Digital® Plus,and DTS-HD Master Audio™
 - ► Lip-Sync pass-through
- ELR and HDBaseT® technologies allow extension up to 330 feet (100 meters)
- POL feature provides power to each ELR receiver through the CAT-5e cable
- Gefen FST speeds up the HDCP authentication process
- Fast and Slow FST Modes
- Advanced EDID management for rapid integration of sources and displays
- Front-panel display for status feedback
- Front-panel push buttons for local switching
- IP controlled via built-in web server, Telnet, and UDP
- RS-232 Serial interface for remote control via an automation control system
- IR control of the matrix via front panel sensor and from each Receiver location
- Broadcast of IR commands from the matrix side to all viewing locations, and from each receiver location to the matrix all sources
- Routing states can be stored and recalled at the touch of a button
- Output masking command
- Optional IR remote control (RMT-MOD-IRN)
- Stand-by mode
- Field upgradable firmware via USB or IP
- Dual redundant hot-swappable power supplies
- Rack-mountable

Packing List

See Pre-Configured Options for packing list details for each pre-configured option. If any of these items are not present in your box when you first open it, immediately contact your dealer or Gefen.

sources displays

32,32 sources displays Modular Matrix for HDMI with HDCP

01 Getting Started

Pre-Configured Options

The following list outlines the available pre-configured options. Because this User Manual covers information on all available configurations, it is important to identify the type of 32x32 Modular Matrix for HDMI w/ HDCP that was purchased.

32 HDMI Inputs / 32 HDMI Outputs (GEF-HDFST-MOD-32432-HD)

Four input cards. Each card uses eight HDMI inputs, providing a total of 32 HDMI inputs.

Four output cards. Each card uses eight HDMI outputs, providing a total of 32 HDMI outputs.

Packing List:

- (1) 32x32 Modular Matrix for HDMI w/ HDCP Frame
- (4) Modular Matrix 8 HDMI Input Cards
- (4) Modular Matrix 8 HDMI Output Cards
- (1) DB-9 cable
- (2) AC power cords
- (1) Quick-Start Guide

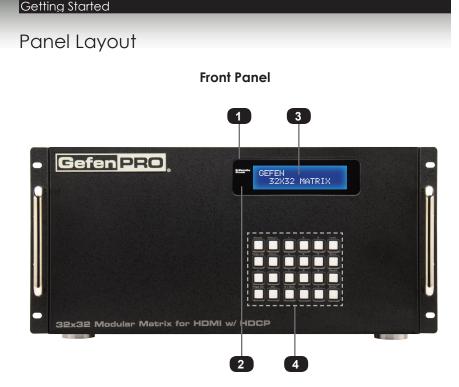

▶ 32 HDMI Input / 32 CAT-5 ELR-POL Outputs (GEF-HDFST-MOD-32432-HDELR)

Four input cards. Each card uses eight HDMI inputs, providing a total of 32 HDMI inputs.

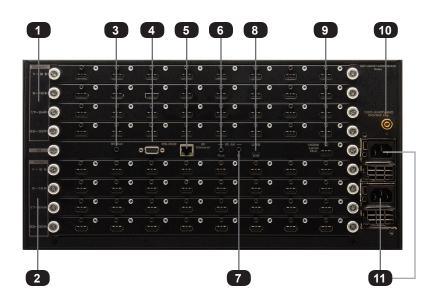

Four output cards. Each card uses eight ELR-POL outputs. Each of these ELR-POL outputs are connected to a Receiver unit, using a CAT-5e cable, allowing you to extend the HDMI signal up to 330 feet (100 meters). 32 ELR-POL Receiver units are included with this package option.

Packing List:

- (1) 32x32 Modular Matrix for HDMI w/ HDCP Frame
- (4) Modular Matrix 8 HDMI Input Cards
- (4) Modular Matrix 8 HDMI Sender over CAT-5 Cards
- (32) HDMI ELR Receivers with POL
- (1) DB-9 Cable
- (2) AC Power Cords
- (1) Quick-Start Guide

| ID | Name | Description |
|----|----------------------|--|
| 1 | Standby / Lock (LED) | When the matrix is in standby mode, this LED indicator will glow bright blue. When the matrix is locked, the LED indicator will glow bright green. See Locking the Matrix for more information. |
| 2 | IR sensor | This IR sensor receives signals from an IR remote. |
| 3 | Front panel display | Provides feedback and matrix status during various operations. |
| 4 | Front panel buttons | Used to control various features on the Matrix. See the section Basic Operation for more information. |

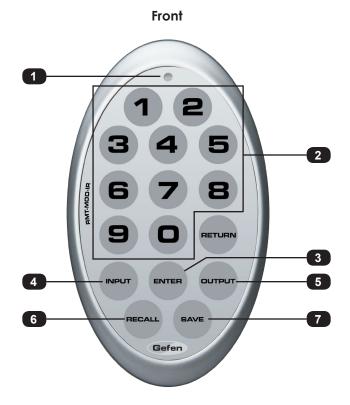

| ID | Name | Description |
|----|-----------------|--|
| 1 | Output (1 - 32) | These four expansion bays accept Output cards, only. |
| 2 | Input (1 - 32) | These four expansion bays accept Input cards, only. |
| 3 | IR Ext | Connect an IR Extender (Gefen part no. EXT-RMT-EXTIRN) to this port. |
| 4 | RS-232 | Connect the included RS-232 cable from this port to an RS-232 device. See RS-232 and IP Configuration for more information. |
| 5 | IP Control | Connect an Ethernet cable between this jack and a LAN to use IP control. See RS-232 and IP Configuration for more information. |
| 6 | IR All (Out) | Connect an IR blaster to this port to send IR commands to multiple devices. This port is only active if the unit is configured with the ELR-POL Output option. |

Back Panel

| 7 | IR All (In) | This port is designed to be used with an IP-based automation control device. Connect the IR cable from an IR Emitter port on the automation control device to this IR port. This port is only active if the unit is configured with the ELR-POL Output option. |
|----|--------------------|---|
| 8 | USB | This mini USB port is used for upgrading the firmware. See Upgrading using USB for more information. |
| 9 | HDMI Local Out | Connect a local HDTV display to this HDMI port. This port is useful for monitoring the currently routed input signal. |
| 10 | Grounding terminal | Connect a grounding wire from the grounding terminal to an approved ground path. |
| 11 | IEC connector | Connect the included AC power cords from these power receptacles to available electrical outlets. |

IR Remote Control Unit

The IR remote control unit (Gefen part no. RMT-MOD-IRN) is not included 32x32 Modular Matrix for HDMI with HDCP but can be purchased separately.

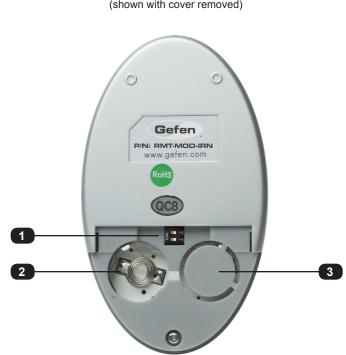

| ID | Name | Description |
|----|-------------------------|---|
| 1 | Activity indicator | This LED flashes bright orange when a key is pressed on the remote. |
| 2 | Input Selection (0 - 9) | Press these buttons to switch to the desired input (source). |
| 3 | Enter | Press this button to commit the routing change. |

NOTE: An Activity indicator that flashes quickly while holding down any one of the buttons indicates a low battery. Replace the battery as soon as possible. See Installing the Battery.

| ID | Name | Description |
|----|--------|---|
| 4 | Input | Press this button prior to selecting the input. |
| 5 | Output | Press this button prior to selecting the output. |
| 6 | Recall | Press this button prior to entering the preset to be loaded. |
| 7 | Save | When saving a routing state, press this button prior to entering the preset number. |

Back (shown with cover removed)

| ID | Name | Description |
|----|---|---|
| 1 | DIP switch bank | Use these DIP switches to set the IR channel of the remote. See Setting the IR Channel for more information. |
| 2 | Primary battery slot (shown without battery) | Holds the battery for operating the remote. Use only 3V CR2032-type batteries. Make sure that the positive (+) side of the battery is facing up. |
| 3 | Alternate battery slot | Allows for the installation of secondary (backup) battery. |

Installing the Battery

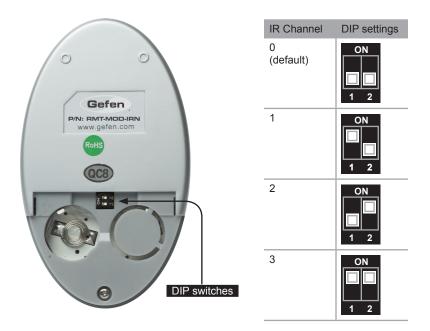

The IR remote control unit ships with two batteries. Only one battery is required for operation. The second battery is a spare.

WARNING: Use only 3V CR2032-type batteries. Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to the instructions.

- 1. Remove the back cover the IR Remote Control unit.
- 2. Insert the included battery into the primary battery slot. The positive (+) side of the battery should be facing up.
- 3. Replace the back cover.

Setting the IR Channel

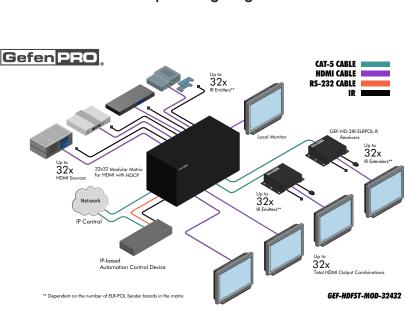

In order for the included IR remote control to communicate with the 32x32 Modular Matrix for HDMI with HDCP, the IR remote control must be set to the same channel as the matrix. Use the #set ir command to set the IR channel of the matrix.

Installation

Because there are several variations of the 32x32 Modular Matrix for HDMI w/ HDCP, we will cover each package option. Locate the connection instructions for the package which was purchased. The wiring diagram at the bottom of the page provides a general reference for connecting the 32x32 Modular Matrix for HDMI w/ HDCP. See the following sections for detailed connection instructions on each package option.

- ► GEF-HDFST-MOD-32432-HD
- ► GEF-HDFST-MOD-32432-HDELR

Sample Wiring Diagram

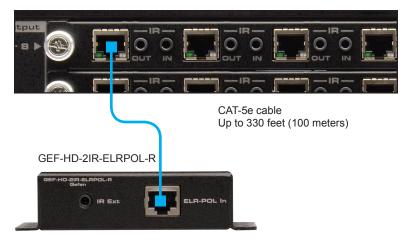

WARNING: Both power supplies should always be connected to a grounded electrical AC outlets. Each power cord should be connected to an electrical outlet on a separate circuit.

GEF-HDFST-MOD-32432-HD

- 1. Connect up to 32 Hi-Def sources to the HDMI inputs on the rear panel of the 32x32 Modular Matrix for HDMI w/ HDCP using HDMI cables.
- 2. Connect up to 32 HDTV displays to the HDMI outputs on the rear panel of the 32x32 Modular Matrix for HDMI w/ HDCP.
- Connect both AC power cords from the 32x32 Modular Matrix for HDMI w/ HDCP to available electrical outlets. Connecting both AC power cords will provide redundancy should one of the power supplies fail. It is recommended that each power cord be connected to an electrical outlet on a separate circuit.

GEF-HDFST-MOD-32432-HDELR

- 1. Connect up to 32 Hi-Def sources to the HDMI inputs on the rear panel of the 32x32 Modular Matrix w/ HDCP using HDMI cables.
- Connect a CAT-5e cable (or better), up to 330 feet (100 meters) from each ELR-POL jack on the Sender card to each of the included ELR-POL Receiver units, as shown below.

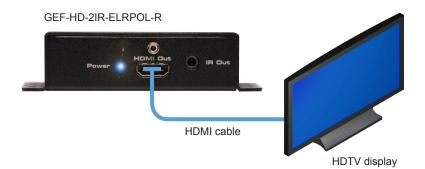

Once the matrix is powered, the Link indicators will glow bright green to indicate a solid link between the output card and the Receiver unit.

The POL indicators will glow bright amber to indicate that the Receiver unit is being powered.

(continued on next page)

 Connect an HDMI cable from the HDMI Out port on each ELR-POL Receiver unit to an HDTV display.

4. Connect both AC power cords from the 32x32 Modular Matrix for HDMI w/ HDCP to available electrical outlets. Connecting both AC power cords will provide redundancy should one of the power supplies fail. It is recommended to connect each power cord to electrical outlets on two separate circuits.

Power to the Receiver unit is delivered from the power supply in the matrix over the CAT-5e cable using Gefen Power Over Line (POL) technology. The Link indicator will glow bright green to indicate a solid connection between the matrix and the Receiver unit. The Power indicator will glow bright blue to indicate that the Receiver unit is being powered.

If either of these LED indicators are OFF, inspect the CAT-5 cable for loose connections or possible defects.

Operating the 32x32 Modular Matrix for HDMI w/ HDCP

Basic Operation

Standby Mode

After the AC power cord(s) is/are connected to the matrix, the LED indicator next to the display will glow bright blue. The matrix is now in *standby mode*.

Standby mode is similar to powering-off the matrix. However, in standby mode, the matrix can be powered-on by executing the $\#_{power}$ command. See RS-232 and IP Configuration for more information on using the RS-232 / IP commands.

Powering the Matrix

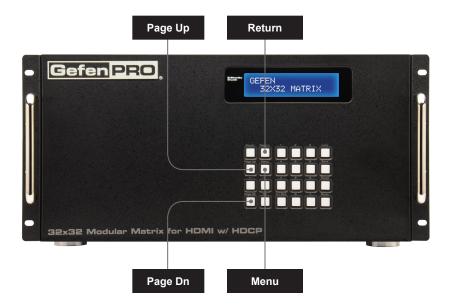

- 1. From *standby mode*, press the **Power** button on the front panel.
- 2. The standby mode LED will turn off.
- 3. After a few moments, the home screen will be displayed:

4. To return to *standby mode*, press the **Power** button on the front panel.

Accessing the Menu System

The 32x32 Modular Matrix for HDMI w/ HDCP uses a built-in menu system which provides access to other non-routing functions. Use the **Menu** button to access the menu system.

- 1. From the *home screen*, press the **Menu** button.
- 2. To cycle through each of the menus, do one of the following:
 - Consecutively press the Menu button. Using the Menu button will move forward through each of the menus.
 - Use the Page Up or Page Dn buttons. Use the Page Up button to go backward through each menu system. Use the Page Dn button to go forward through the menu system.
- 3. Press the **Return** button at any time to return to the *home screen*.

| Display | Description |
|-----------------|---|
| 1. IP CONFIG | Allows IP configuration for the following: IP address, Net mask, and Gateway address. See RS-232 and IP Configuration for more information. |
| 2. TEMPERATURE | Provides temperature information of the internal boards. See Temperature Menu for more information. |
| 3. LCM CONTRAST | Allows contrast adjustment of the front-panel display. See LCM Contrast Menu for more information. |

Menu System

IP Configuration Menu

The 32x32 Modular Matrix for HDMI w/ HDCP can be controlled using the built-in Web interface, Telnet, or UDP protocols. In order to use these communication methods, the IP settings of the matrix must be set accordingly. The IP Configuration menu displays the current IP address, net mask, and gateway address for the matrix.

I NOTE: Depending upon the network, all related IP, Telnet, and UDP settings will need to be assigned. IP settings cannot be changed using the front-panel buttons and must be configured using the RS-232 / IP command set. See RS-232 and IP Configuration for more information.

1. From the *home screen*, press the **Menu** button. The **IP Config** menu will be displayed.

 Press the Enter button to enter the IP Config menu. The current IP address of the matrix will be displayed.

3. Press the ← or → button to move backward or forward, respectively, to display the current IP address, net mask, and gateway address of the matrix.

| Display | Description |
|----------------------------------|--|
| 1A. IP ADDRESS: 192.168.1.239 | Displays the current IP address of the matrix. Use the #sipadd command to change the IP address. |
| 1B. NETMASK 255.255.255.0 | Displays the subnet mask of the matrix. Use the #snetmask command to change the subnet mask. |
| 1C. GATEWAY 192.168.1.1 | Displays the gateway address of the matrix. Use the #sgateway command to change the gateway address. |

4. Press the **Return** button, twice, to return to the *home screen*.

Temperature Menu

Temperature data within the enclosure can be reported using the buttons on the front panel.

1. From the *home screen*, press the **Menu** button. The **IP Config** menu will be displayed.

2. Consecutively press the **Page Up** or **Page Dn** button until the **Temperature** menu is displayed.

3. Press the **Enter** button to enter the **Temperature** menu. The temperature for each of the internal boards will be displayed.

T1: 44.375°C T2: 43.250°C 2A.

4. Press the **Return** button, twice, to return to the *home screen*.

LCM Contrast Menu

The LCM Contrast Menu is used to adjust the visual intensity (contrast) of the characters in the front-panel display. The contrast can be set to four different levels of intensity. The default value is 4.

1. From the *home screen*, press the **Menu** button. The **IP Config** menu will be displayed.

 Consecutively press the Page Up or Page Dn button until the LCM Contrast menu is displayed.

3. Press the Enter button to enter the LCM Contrast menu.

4. Enter a number between 1 and 4, using the keypad on the front panel. For example, to set the contrast to 1, press button 1 on front panel. Once the desired button is pressed, the value will appear in the display and the setting will take effect. If another setting is desired, enter a number between 1 and 4 to see the effect.

5. Press the Enter button to accept the changes. The display will indicate "OK".

6. Press the **Return** button, twice, to return to the *home screen*.

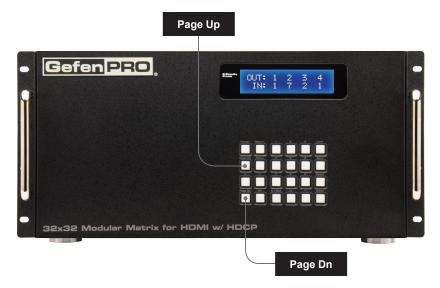

Routing Basics

Displaying the Current Routing Status

To display the current routing status of the 32x32 Modular Matrix for HDMI w/ HDCP, press the **Page Up** or **Page Dn** buttons.

1. Press the **Page Dn** button on the front panel. The routing status of the first four outputs is displayed.

In the illustration below, we can see that Input 1 is routed to Output 1, Input 7 is routed to Output 2, and so on.

2. Press the Page Dn button to view the routing status of the next four inputs / outputs.

Consecutively press the **Page Dn** button to view the next four outputs. The last item to be displayed will be the routing status of **HDMI Local Out**.

Routing a Source to an Output

Using the Front Panel Buttons

The following example illustrates the routing process. An input may be routed to a single or multiple outputs. Multiple inputs cannot be routed to a single output.

1. Press the In / Out button on the front panel.

| - [| Gefen PRO |
|-----|---------------------------------------|
| | |
| - | 32x32 Modular Matrix for HDMI w/ HDCP |
| | In / Out Enter |

2. The front panel display will indicate that routing mode is active.

3. Select an input (1 - 32) using the numerical keys on the front panel. For this example, we will route Input 15 to Output 21. Therefore, we'll press buttons 1 and 5.

If an incorrect value is entered by accident, use the $\,\leftarrow\,$ button to delete the last number entered.

4. Press the In / Out button, again. The display will change to the following:

5. Enter the number of the output using the numerical keys on the front panel. Since we want to route Input 15 to Output 21, we will press buttons 2 and 1. The selected output will appear on the display.

Once again, if an incorrect output value is entered by accident, use the $\,\leftarrow\,$ button to delete the last number entered.

If the decision to change the *input* is made, press the **Return** button to go back to the previous screen. The previous input entry will automatically be erased:

6. Once the desired input and output have been entered, press the **Enter** button to execute the routing process. The display will show the following:

7. After a few moments, the *home screen* will be displayed.

Routing Basics

Using the IR Remote Control

1. Press the **Input** button on the IR remote control.

2. The front panel display will indicate that routing mode is active.

 Select an input (1 - 32) using the numerical keys on the IR remote control. For example, we will route Input 12 to Output 23. Enter the input by pressing buttons 1 and 2.

If an incorrect value is entered by accident, press the **Return** button to return to the *home screen*.

4. Press the **Output** button.

The display will change to the following:

 Enter the number of the output using the numerical keys on the IR remote control. Since we want to route Input 12 to Output 23, we will press buttons 2 and 3. The selected output will appear on the display.

If an incorrect output value is entered by accident, press the **Return** button to restart the routing process. Pressing the **Return** button will return the matrix to the *home screen*.

6. Once the desired input and output have been entered, press the **Enter** button to execute the routing process.

Routing a Source to Multiple Outputs

The following example illustrates how to route a source to multiple outputs.

IMPORTANT: When routing a source to multiple outputs, HDMI Local Out (Output 33) is not included as part of the routing process. To route a source to HDMI Local Out, it must be performed separately. See Routing a Source to an Output.

1. Press the In / Out button on the front panel.

2. The front panel display will indicate that routing mode is active.

3. Select an input (1 - 32) using the numerical keys on the front panel.

If an incorrect value is entered by accident, use the $\ \leftarrow \$ button to delete the last number entered.

4. Press the In / Out button, again. The display will change to the following:

5. Enter the number of the first output using the numerical keys on the front panel. The selected output will appear on the display.

If an incorrect output value is entered by accident, use the $\ \leftarrow \$ button to delete the last number entered.

If the decision to change the *input* is made, press the **Return** button to go back to the previous screen. The previous input entry will automatically be erased:

6. Press the + button to add another output.

7. Enter the desired output. In the example below, we have entered 4.

- 8. Repeat steps 6 and 7 to add more outputs.
- 9. Press the **Enter** button to complete the routing procedure.
- 10. After a few moments, the *home screen* will be displayed.

Routing a Source to All Outputs

The following example illustrates the process for routing a single input to all outputs, simultaneously.

1. Press the All button on the front panel.

2. The display on the front panel will show the following:

3. Select an input (1 - 32) using the numerical keys on the front panel. For this example, we will route Input 20 to all outputs. Therefore, we'll press buttons 2 and 0.

If an incorrect value is entered by accident, use the $\ \leftarrow \$ button to delete the last number entered.

- 4. Press the Enter button on the front panel.
- 5. The display will indicate that the routing process was successful.

Save

Saving a Routing Preset

Using the Front Panel Buttons

The 32x32 Modular Matrix for HDMI w/ HDCP allows routing (and masking) states to be saved to internal non-volatile memory. Each routing state can be recalled at a later time. Even if the matrix is powered OFF, the presets will be retained in memory.

| ¹ Gefen Dio | GEFEN 32X32 MATRIX |
|-------------------------------|-----------------------|
| | |
| 32x32 Modular Matrix for H | |

2. The display will show the following:

3. Select a preset (1 - 8) by using the numerical keys on the front panel. For this example, we will save the current routing status to Preset 2 by pressing button **2**.

4. Press the **Enter** button to save the current routing state to the preset. The display will indicate that the routing process was successful.

Routing Basics

Using the IR Remote Control

1. Press the **Save** button on the IR remote control.

2. The display will show the following:

 Select a preset (1 - 8) by using the numerical keys on the IR remote control. For this example, we will save the current routing status to Preset 3 by pressing button 3.

If an incorrect output value is entered by accident, press the **Return** button to restart the process. Pressing the **Return** button will return the matrix to the home screen.

4. Press the **Enter** button to save the current routing state to the preset. The front-panel display will indicate that the preset has been saved.

Recall

Recalling a Saved Routing Preset

The 32x32 Modular Matrix for HDMI w/ HDCP allows saved routing (and masking) states to be recalled from memory for instant access.

In this example, we will recall the routing preset that we stored in the previous example.

1. Press the Recall button on the front panel.

2. The display will show the following:

3. Select a preset (1 - 8) by using the numerical keys on the front panel. For this example, we will recall Preset 3 by pressing button **3**.

4. Press the Enter button to recall the preset.

Routing Basics

Using the IR Remote Control

1. Press the **Save** button on the IR remote control.

2. The display will show the following:

 Select a preset (1 - 8) by using the numerical keys on the IR remote control. For this example, we will save the current routing status to Preset 3 by pressing button 3.

If an incorrect output value is entered by accident, press the **Return** button to restart the process. Pressing the **Return** button will return the matrix to the home screen.

4. Press the **Enter** button to save the current routing state to the preset. The front-panel display will indicate that the preset has been saved.

Locking the Matrix

Locking the matrix will prevent any changes by disabling all buttons (except the **Lock** button) on the front panel. This feature is useful in preventing routing or other changes caused by accidentally bumping or pressing the buttons on the front panel.

1. Press the **Lock** button on the front panel.

2. Once the matrix is locked, the LED indicator next to the display will glow bright green.

3. To unlock the matrix, press and hold the **Lock** button again, until the LED indicator turns off. The display will return to the *home screen*.

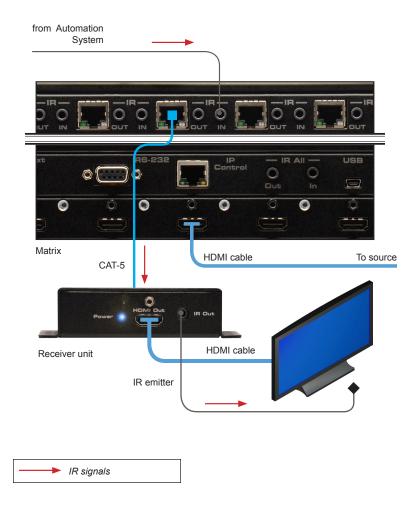

Using Bidirectional IR

The 32x32 Modular Matrix for HDMI w/ HDCP provides IR control. Controlling IR through the matrix can be accomplished using an IR extender (Gefen part no. EXT-RMT-EXTIRN) or an automation control device. Refer to the user documentation that came with your automation system for details.

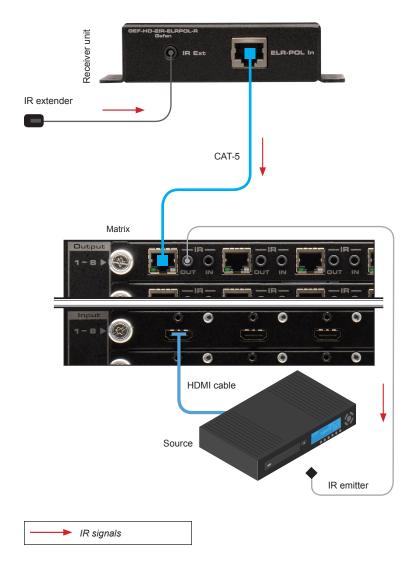

Controlling the Display from the Source Location

- 1. Connect the 3.5mm mini-mono end of the IR cable from the **IR IN** port on the matrix to the automation system.
- 2. Connect an IR emitter (Gefen part no. EXT-IREMIT) from the **IR Out** jack on the Receiver unit to IR sensor on the display.

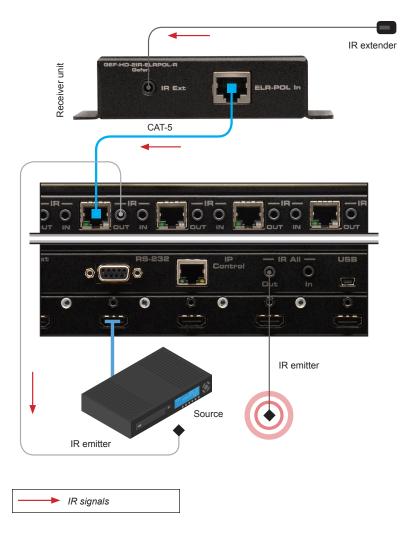

Controlling the Source from the Viewing Location

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the **IR Ext** port on the Receiver unit.
- 2. Connect an IR emitter (Gefen part no. EXT-IREMIT) from the **IR OUT** jack on the 32x32 Modular Matrix for HDMI w/ HDCP to the IR sensor on the source.

Controlling Multiple Sources

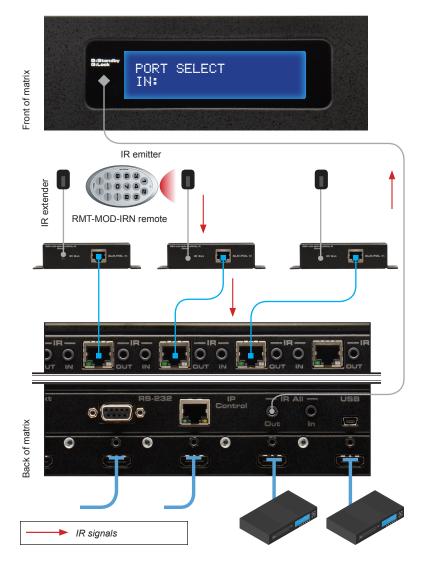

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the **IR Ext** port on the Receiver unit.
- 2. Connect an IR emitter (Gefen part no. EXT-IREMIT) to the **IR OUT** jack on the 32x32 Modular Matrix for HDMI w/ HDCP.
- Another IR emitter can be connected to the IR All Out port, in order to control individual (or multiple) sources that are not controlled using the IR emitter connected to the IR OUT port.

Controlling the Matrix from the Viewing Location

Routing can be managed from any viewing location, using the included IR remote control unit, regardless of the current routing state of the matrix.

- 1. Connect an IR extender (Gefen part no. EXT-RMT-EXTIRN) to the IR Ext jack on each Receiver unit.
- Connect an IR emitter (Gefen part no. EXT-IREMIT) from the IR All Out port on the back of the matrix and place the emitter over the IR sensor on the front panel of the matrix.

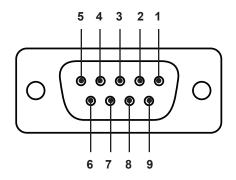

32,32 sources displays Modular Matrix for HDMI with HDCP

RS-232 and IP Configuration

RS-232 Interface

Matrix

Only TXD, RXD, and GND pins are used.

RS-232 Settings

| Description | Setting |
|-----------------------|---------|
| Baud rate | 19200 |
| Data bits | 8 |
| Parity | None |
| Stop bits | 1 |
| Hardware flow control | None |

IMPORTANT: When sending RS-232 commands, a carriage return must be included at the end of the command. A space *must* be included between the command and the parameter.

IP / UDP Configuration

The 32x32 Modular Matrix for HDMI w/ HDCP supports IP-based control using Telnet, UDP, or the built-in Web-based GUI. To set up IP control, the network settings for the 32x32 Modular Matrix for HDMI w/ HDCP must be configured via RS-232. The default network settings for the matrix are as follows:

| Description | IP Address / Port | Description | IP Address / Port |
|-------------|-------------------|-----------------|-------------------|
| IP Address | 192.168.1.72 | UDP Port | 23 |
| Subnet | 255.255.255.0 | Local UDP Port | 50007 |
| Gateway | 192.168.1.1 | Remote UDP IP | 192.168.1.255 |
| HTTP Port | 80 | Remote UDP Port | 50008 |

- Connect an RS-232 cable from the PC to the 32x32 Modular Matrix for HDMI w/ HDCP. Also make sure that an Ethernet cable is connected between the matrix and the network.
- 2. Launch a terminal emulation program (e.g. HyperTerminal) and use the RS-232 settings listed on the previous page.

NOTE: Depending upon the network, all related IP, Telnet, and UDP settings will need to be assigned. Consult your network administrator to obtain the proper settings.

- 3. Set the IP address for the matrix using the #sipadd command.
- 4. Set the subnet mask using the #snetmask command.
- 5. Set the gateway (router) IP address using the #sgateway command.
- 6. Set the Telnet listening port using the #set_telnet_port command.
- 7. Set the HTTP listening port using the #set http port command.
- Set the UDP remote IP address for the matrix using the #set_udp_remote_ip command.
- 9. Set the UDP listening port for the matrix using the #set udp port command.
- 10. Set the UDP remote port for the matrix using the #set_udp_remote_port
 command.
- 11. Reboot the matrix to apply all changes, then type the IP address that was specified in step 3, in a Web browser to access the Web GUI. Use the same IP address to Telnet to the matrix.

Commands

IP Configuration

| Command | Description |
|-----------------------------|---|
| #display_telnet_welcome | Enable / disable the Telnet welcome message |
| #ipconfig | Displays the current IP configuration |
| #resetip | Resets the IP configuration to factory-default settings |
| #set_http_port | Sets the Web server listening port |
| #set_telnet_pass | Sets the Telnet password |
| #set_telnet_port | Sets the Telnet listening port for the matrix |
| #set_webui_ad_pass | Sets the Administrator password for the Web GUI |
| #set_webui_op_pass | Sets the Operator password for the Web GUI |
| #sgateway | Sets the IP address of the (router) gateway |
| #show_gateway | Displays the current gateway address of the matrix |
| #show_http_port | Displays the current HTTP listening port of the matrix |
| #show_ip | Displays the current IP address of the matrix |
| #show_mac_addr | Displays the MAC address of the matrix |
| #show_netmask | Displays the current net mask of the matrix |
| #show_telnet_port | Displays the Telnet listening port |
| #sipadd | Sets the IP address of the matrix |
| #snetmask | Sets the Net mask of the matrix |
| <pre>#use_telnet_pass</pre> | Force password during Telnet sessions |

#display_telnet_welcome

The $\texttt{#display_telnet_welcome}$ command enables / disables the Telnet welcome message during a Telnet session.

<u>Syntax</u>:

#display telnet welcome

Parameters:

| param1 | Value | [0 1] |
|--------|-------|-------------------------|
| | Value | Description |
| | 0 | Disable welcome message |
| | 1 | Enable welcome message |
| | | |

Example:

#display telnet welcome 1

TELNET WELCOME SCREEN IS ENABLED

When enabled and a Telnet session has been started, the following will appear:

Welcome to GEF-HDFST-MOD-32432 TELNET

telnet->

#ipconfig

The #ipconfig command displays the current TCP settings.

Syntax:

#ipconfig

Parameters:

None

Example:

#ipconfig
IP Configuration is :

IP: 192.168.2.238 NETMASK: 255.255.255.0 GATEWAY: 192.168.2.1 MAC Address: 00-1c-91-03-00-04

#resetip

The #resetip command resets the IP configuration to factory-default settings. The matrix must be rebooted after executing this command.

Syntax:

#resetip

Parameters:

None

Syntax:

#resetip

```
IP CONFIGURATION WAS RESET TO FACTORY DEFAULTS
IP: 192.168.1.72
Netmask: 255.255.255.0
Gateway: 192.168.1.1
```

#set_http_port

The <code>#set_http_port</code> command specifies the Web server listening port. The matrix must be rebooted after executing this command. The default port setting is 80. Use the <code>#show http port</code> command to display the current HTTP listening port.

<u>Syntax</u>:

#set http port param1

Parameters:

param1

Port

[1 ... 1024]

Example:

#set http port 82

HTTP COMMUNICATION PORT 82 IS SET. PLEASE REBOOT THE UNIT.

#set_telnet_pass

The #set_telnet_pass command sets the Telnet password. The password is case-sensitive and cannot exceed 8 characters in length. The default password is Admin.

<u>Syntax</u>:

#set telnet pass param1

Parameters:

param1 Password

Example:

#set telnet pass 3ver3st

TELNET INTERFACE PASSWORD IS SET

#set_telnet_port

The #set_telnet_port command sets the Telnet listening port. The matrix must be rebooted after executing this command. The default port setting is 23. Use the #show telnet port command to display the current Telnet listening port.

<u>Syntax</u>:

#set telnet port param1

Parameters:

param1

Port

[1 ... 1024]

Example:

#set telnet port 24

TELNET COMMUNCATION PORT 24 IS SET. PLEASE REBOOT THE UNIT.

#set_webui_ad_pass

The #set_webui_ad_pass command sets the Administrator password for the Web GUI.
The password is case-sensitive and cannot exceed 7 characters in length. The default
password is Admin.

<u>Syntax</u>:

#set_webui_ad_pass param1

Parameters:

param1 Password

Example:

#set_webui_ad_pass bossman

WEB UI ADMINISTRATOR PASSWORD IS SET

#set_webui_op_pass

The #set_webui_ad_pass command sets the Operator password for the Web GUI. The default password is Admin.

<u>Syntax</u>:

#set webui op pass param1

Parameters:

param1 Password

Example:

#set webui op pass minion

WEB UI OPERATOR PASSWORD IS SET

#sgateway

The #sgateway command sets the gateway address. The gateway must be typed using dot-decimal notation. The matrix must be rebooted after executing this command. The default gateway is 192.168.1.1.

<u>Syntax</u>:

#sgateway param1

Parameters:

param1 Gateway

Example:

#sgateway 192.168.1.5

GATEWAY ADDRESS 192.168.1.5 IS SET. PLEASE REBOOT THE UNIT.

#show_gateway

The <code>#show_gateway</code> command displays the current gateway address of the matrix. Use the <code>#sgateway</code> command to set the gateway address.

<u>Syntax</u>:

#show_gateway

Parameters:

None

Example:

#show gateway

GATEWAY ADDRESS IS: 192.168.1.5

#show_http_port

The <code>#show_http_port</code> command displays the current HTTP listening port of the matrix. Use the <code>#set http port</code> command to set the HTTP listening port.

Syntax:

#show http port

Parameters:

None

Example:

#show http port

HTTP COMMUNICATION PORT IS: 82

#show_ip

The $\#show_ip$ command displays the current IP address of the matrix. Use the #sipadd command to set the IP address.

<u>Syntax</u>:

#show_ip

Parameters:

None

Example:

#show ip

IP ADDRESS IS: 192.168.1.239

#show_mac_addr

The #show mac addr command displays the MAC address of the matrix.

Syntax:

#show_mac_addr

Parameters:

None

Example:

#show mac addr

MAC ADDRESS IS: 00-1c-91-03-00-02

#show_netmask

The #show_netmask command displays the current net mask of the matrix. Use the #snetmask command to set the net mask.

<u>Syntax</u>:

#show netmask

Parameters:

None

Example:

#show netmask

NETMASK ADDRESS IS: 255.255.255.0

#show_telnet_port

The <code>#show_telnet_port</code> command displays the current Telnet port of the matrix. Use the <code>#set_telnet_port</code> command to set the Telnet listening port.

Syntax:

#set telnet port param1

Parameters:

param1

Port

[1 ... 65535]

Example:

#set telnet port 24

TELNET COMMUNCATION PORT 24 IS SET. PLEASE REBOOT THE UNIT.

#sipadd

The #sipadd command sets the IP address of the matrix. The IP address must be entered using dot-decimal notation. The matrix must be rebooted after executing this command. The default IP address is 192.168.1.72. Use the #show_ip or #ipconfig command to display the current IP address of the matrix.

Syntax:

#sipadd param1

Parameters:

param1

IP address

Example:

#sipadd 192.168.1.239

IP ADDRESS 192.168.1.239 IS SET. PLEASE REBOOT THE UNIT.

#snetmask

The #snetmask command sets the subnet mask. The net mask must be entered using dot-decimal notation. The matrix must be rebooted after executing this command. The default net mask is 255.255.255.0. Use the #show_netmask command to display the current net mask of the matrix.

Syntax:

#snetmask param1

Parameters:

param1

Net mask

Example:

#snetmask 255.255.0.0

NETMASK ADDRESS 255.255.0.0 IS SET. PLEASE REBOOT THE UNIT.

#use_telnet_pass

The $\#use_telnet_pass$ command forces the password credentials for each Telnet session. The default setting is 0 (disabled).

<u>Syntax</u>:

#use telnet pass param1

Parameters:

| param1 | Value | | [0 1] |
|--------|-------|------------------|-------|
| | Value | Description | |
| | 0 | Disable password | |
| | 1 | Enable password | |

Example:

#use telnet pass 1

TELNET INTERACE PASSWORD IS ENABLED

UDP Configuration

| Command | Description |
|---------------------------------|--|
| #set_udp_port | Sets the local UDP listening port |
| <pre>#set_udp_remote_ip</pre> | Sets the remote UDP IP address |
| <pre>#set_udp_remote_port</pre> | Sets the remote UDP listening port |
| #show_udp_port | Displays the current local UDP listening port |
| #show_udp_remote_ip | Displays the current remote UDP IP address |
| #show_udp_remote_port | Displays the current remote UDP listening port |
| #use_udp_enable | Enables / disables UDP access |

#set_udp_port

The $\#set_udp_port$ command sets the local UDP server listening port. The default port setting is 21. The matrix must be rebooted after executing this command. Use the $\#show_udp_port$ command to display the current local UDP listening port.

Syntax:

#set_udp_port param1

Parameters:

param1

Port

[1 ... 65535]

Example:

#set_udp_port 56

UDP COMMUNICATION PORT 56 IS SET

#set_udp_remote_ip

The <code>#set_udp_remote_ip</code> command sets the remote UDP IP address. The IP address must be specified using dot-decimal notation. The default UDP remote IP address is 192.168.1.255. The matrix must be rebooted after executing this command.

<u>Syntax</u>:

#set_udp_remote_ip param1

Parameters:

param1

UDP address

Example:

#set udp remote ip 192.168.1.227

REMOTE UDP IP ADDRESS 192.168.1.227 IS SET.

#set_udp_remote_port

The #set_udp_remote_port command sets the remote UDP listening port. The default remote UDP listening port is 50008. The matrix must be rebooted after executing this command.

Syntax:

#set_udp_rport param1

Parameters:

param1

Port

[1 ... 65535]

Example:

#set_udp_rport 50008

REMOTE UDP COMMUNICATION PORT 50008 IS SET.

#show_udp_port

The <code>#show_udp_port</code> command displays the current local UDP listening port. Use the <code>#set_udp_port</code> command to set the local UDP listening port.

<u>Syntax</u>:

#show_udp_port

Parameters:

None

Example:

#show udp port

UDP COMMUNICATION PORT IS: 56

#show_udp_remote_ip

The <code>#show_udp_remote_ip</code> command displays the remote UDP IP address. Use the <code>#set_udp_remote_ip</code> command to set the remote UDP IP address.

Syntax:

#set udp remote ip param1

Parameters:

None

Example:

#set udp remote ip 192.168.1.227

REMOTE UDP IP ADDRESS 192.168.1.227 IS SET.

#show_udp_remote_port

The <code>#show_udp_remote_port</code> command displays the remote UDP listening port. Use the <code>#set_udp_remote_port</code> to set the remote UDP listening port.

<u>Syntax</u>:

#set udp rport param1

Parameters:

None

Example:

#show udp remote port

REMOTE UDP COMMUNICATION PORT IS: 50008

#use_udp_enable

The #use udp enable command enables or disables UDP access mode.

Syntax:

#use udp enable param1

Parameters:

param1

| Value | Value | |
|-------|-------------|--|
| Value | Description | |
| 0 | Disable UDP | |
| 1 | Enable UDP | |
| | | |

Example:

#use_udp_enable 1

UDP ACCESS IS ENABLE

FST

| Command | Description |
|-----------|---|
| #fst_fast | Sets the specified inputs to Fast switching mode |
| #fst_slow | Sets the specified inputs to Slow switching mode |
| #show_fst | Displays the current switching mode for the specified input |

#fst fast

The $\#\texttt{fst_fast}$ command sets the specified inputs to Fast switching mode. By default, all inputs are set to Fast switching mode. Up to 32 inputs can be specified at a time. If *param1* = 0, then all inputs are set to Fast switching mode.

<u>Syntax</u>:

#fst fast param1 [...param32]

Parameters:

| Input | | |
|----------------|---------------|-----------------|
| | | |
| 6 10 22 27 32 | | |
| 6, 10, 22, 27, | 32 ARE SET I | O FST FAST MODE |
| | 6 10 22 27 32 | |

#fst fast 0

ALL INPUTS ARE SET TO FST FAST MODE

#fst_slow

The $\#fst_slow$ command sets the specified inputs to Slow (normal) switching mode. Up to 32 inputs can be specified at a time. If *param1* = 0, then all inputs are set to Slow switching mode.

Syntax:

```
#fst slow param1 [...param32]
```

Parameters:

| param1 | Input | [1 32] |
|-------------------|-------|--------|
| <u>Examples</u> : | | |

#fst slow 1 7 8 9 10 12 17 31

INPUTS 1, 7, 8, 9, 10, 12, 17, 31 ARE SET TO FST SLOW MODE

#fst slow 0

ALL INPUTS ARE SET TO FST SLOW MODE

#show_fst

The $\#show_fst$ command displays the switching mode of the specified input. If *param1* = 0, then the switching mode of all inputs are displayed.

Syntax:

#show fst param1

Parameters:

param1

Input

[1 ... 32]

Examples:

#show fst 6

INPUT 6(Input6) IS IN FAST SWITCHING MODE

#show fst 0

| INPUT | 1(Input1) | IS | IN | SI | MOL | S₽ | IITC | HINC | G MO | DDE |

[1 ... 33]

Routing and Masking

| Command | Description |
|---------------------------|---|
| #mask | Masks the video on the specified output(s) |
| <pre>#recall_preset</pre> | Loads the specified routing / masking preset |
| #save_preset | Saves the current routing / masking state to a preset |
| #set_bank_name | Assigns an EDID bank with the specified name |
| #set_input_name | Assigns an input with the specified name |
| #set_output_name | Assigns an output with the specified name |
| #set_preset_name | Assigns a preset with the specified name |
| #show_bank_name | Displays the name for the specified EDID bank |
| #show_input_name | Displays the specified input name |
| #show_mask | Displays the current masking status of each output |
| #show_output_name | Displays the name of the specified output |
| #show_preset_name | Displays the specified preset name |
| #unmask | Unmasks the specified outputs |
| r | Routes the specified input to the specified outputs |
| S | Routes the specified inputs to all outputs |

#mask

The #mask command masks the video on the specified outputs. If *param1* = 0, then all outputs will be masked. Output 33 is **HDMI Local Out**.

<u>Syntax</u>:

#mask param1 [...param33]

Parameters:

param1

Output

Example:

#mask 1 3 5 7 11

OUTPUTS 1, 3, 5, 7, 11 ARE MASKED

Commands

#recall_preset

The #recall_preset command loads the specified preset. Use the #save_preset command to store a preset.

<u>Syntax</u>:

| <pre>#recall preset p</pre> | araml |
|-----------------------------|-------|
|-----------------------------|-------|

Parameters:

param1

Preset

[1 ... 8]

Example:

#recall preset 7

RECALLED THE ROUTING STATE SAVED TO PRESET 7

#save preset

The <code>#save_preset</code> command saves the current routing / masking state to the specified preset. Use the <code>#recall_preset</code> command to load a preset.

Syntax:

#save preset param1

Parameters:

param1

Preset

[1 ... 8]

Example:

#save preset 3

CURRENT ROUTING STATE IS SAVED TO PRESET 3

#set_bank_name

The #set bank name command names the specified bank.

Syntax:

#set_bank_name param1 param2

Parameters:

| param1 | Bank | [1 8] |
|--------|------|-------|
| param2 | Name | |

Example:

#set_bank_name 5 Dell_30
Dell 30 NAME IS ASSIGNED TO BANK 5

#set_input_name

The #set input name command assigns a name to the specified input on the matrix.

Syntax:

#set input name param1 param2

Parameters:

param1Input[1 ... 32]param2Name

Example:

#set input name 5 Blu-ray

Blu-ray NAME IS ASSIGNED TO INPUT 5

... 33]

#set_output_name

The #set_output_name command assigns a name to the specified output on the matrix. Output 33 is **HDMI Local Out**.

<u>Syntax</u>:

#set output name param1 param2

Parameters:

| param1 | Output | [1. |
|--------|--------|-----|
| param2 | Name | |

Example:

#set_output_name 3 Sony_XBR

Sony XBR NAME IS ASSIGNED TO OUTPUT 3

#set_preset_name

The #set_preset_name command names the specified preset. The name of the preset cannot exceed 20 characters in length Spaces are not permitted when naming presets. If a space is required, then use the underscore ("_") character.

Syntax:

#set_preset_name param1 param2

Parameters:

| param1 | Preset | [1 8] |
|--------|--------|-------|
| param2 | Name | |

Example:

#set preset name 8 Studio51

Studio51 NAME IS ASSIGNED TO PRESET 8

#show_bank_name

The #show bank name command displays the name for the specified EDID bank.

Syntax:

#show_bank_name param1

Parameters:

param1

Bank

[1 ... 8]

Example:

#show_bank_name 5

THE NAME FOR BANK 2 IS: Dell_30

#show_input_name

The #show input name command displays the name of the specified input.

Syntax:

#show input name param1

Parameters:

param1

Input

[1 ... 32]

Example:

#show_input_name 5

THE NAME FOR INPUT 5 IS: Blu-ray

Commands

#show_mask

The #show_mask command displays the mask status of the specified output. Output 33 is **HDMI Local Out**.

<u>Syntax</u>:

#show mask param1

Parameters:

param1

Output

[1 ... 33]

Example:

#show_mask 15

OUTPUT 15 IS UNMASKED

#show output name

The $\#{\tt show_output_name}$ command displays the name of the specified output. Output 33 is HDMI Local Out.

Syntax:

#show output name param1

Parameters:

param1

Output

[1 ... 33]

Example:

#show output name 3

THE NAME FOR OUTPUT 3 IS: Sony_XBR

#show_preset_name

The #show preset name command displays the name of the specified preset.

Syntax:

#show_preset_name param1

Parameters:

param1

Preset

[1 ... 8]

Example:

#show preset name 8

THE NAME FOR PRESET 8 IS: Studio51

#unmask

The #unmask command unmasks the specified output(s). Up to 32 outputs can be specified at a time. If *param1* = 0, then all outputs will be unmasked. Output 33 is **HDMI** Local Out.

Syntax:

#unmask param1 [... param33]

Parameters:

| param1 | Output | [1 33] |
|-----------------------|--------------|--------|
| <u>Examples</u> : | | |
| #unmask 3 | | |
| OUTPUT 3 IS UNMASKED | | |
| #unmask 1 3 5 6 7 | | |
| OUTPUTS 1, 3, 5, 6, 7 | ARE UNMASKED | |
| turme els 0 | | |

#unmask O

ALL OUTPUTS ARE UNMASKED

r

The r command routes the specified input to the specified outputs. Up to eight outputs can be specified at a time. Do not precede this command with the "#" symbol. If *param2* = 0, then the specified input will be routed to all outputs. Output 33 is **HDMI Local Out**. Also see the s command.

Syntax:

r param1 param2 [... param33]

Parameters:

| param1 | Input | [1 32] |
|--------|--------|--------|
| param2 | Output | [1 33] |

Example:

r 1 2 3 7 8 9

INPUT 1 IS SET TO OUTPUTS 2, 3, 7, 8, 9

r 5 0

INPUT 5 IS SET TO ALL OUTPUTS.

s

The s command routes the specified inputs to all outputs. Do not precede this command with the "#" symbol. If *param1* = 0, then the matrix will be placed in a 1-to-1 routing state. In other words, Input 1 is routed to Output 1, Input 2 is routed to Output 2, and so on.

Syntax:

s paraml

Parameters:

| param1 | Input | [1 32] |
|------------------------|--------------|--------|
| <u>Example</u> : | | |
| s 2 | | |
| ALL OUTPUTS ARE ROUTED |) TO INPUT 2 | |
| s 0 | | |
| Routing 1-1,2-2, | | |

System

| Command | Description |
|-------------------------|---|
| #echo | Enables / disables RS-232 feedback |
| #fadefault | Resets the routing and masking to factory-default settings |
| #hdcp | Enables / disables HDCP detection |
| #help | Displays a list of available RS-232 / Telnet commands |
| #hdp_pulse | Cycles with HPD line on the specified output |
| #lock_edid | Locks the local EDID when the matrix is power-cycled |
| <pre>#lock_matrix</pre> | Locks / unlocks the matrix |
| #power | Toggles the power on the matrix |
| #reboot | Reboots the matrix |
| #set_edid | Sets the specified EDID to an input or bank |
| #set_ir | Sets the IR channel for the matrix |
| #show_fw | Displays the current version of matrix firmware |
| #show_hdcp | Displays the HDCP status of the specified input |
| #show_hpd | Displays the HPD status of the specified input |
| #show_ir | Displays the current IR channel of the matrix |
| #show_out_colordpt | Displays the maximum color depth supported by the display (sink) device based on the EDID |
| #show_out_res | Displays the maximum video resolution supported by the display (sink) device, based on the EDID |
| #show_r | Displays the current routing status of the specified output |
| #show_rsense | Displays the RSENSE status of the specified output |
| #show_ver_data | Displays the current firmware and hardware version |
| m | Displays the current matrix routing status |
| n | Displays the routing status of the specified output |

#echo

The #echo command enables / disables (toggles) the RS-232 feedback.

Value

Syntax:

#echo param1

Parameters:

param1

[0 ... 1]

| Value | Description |
|-------|------------------|
| 0 | Disable feedback |
| 1 | Enable feedback |

Example:

#echo 1

LOCAL ECHO IS ON

#fadefault

The #fadefault command resets the matrix to factory-default settings. Routing is restored to a "one-to-one: state, outputs are unmasked, and all IP and UDP settings are reset to default settings.

Syntax:

#fadefault

Parameters:

None

Example:

#fadefault

MATRIX WAS RESET TO FACTORY DEFAULTS MATRIX IS ON MATRIX IS UNLOCKED LOCAL ECHO IS ON ALL OUTPUTS ARE UNMASKED SET HPD HIGH TO ALL INPUT IP ADDRESS IS: 192.168.1.72 GATEWAY ADDRESS IS: 192.168.1.1 NET MASK ADDRESS IS: 255.255.255.0 INPUT NAME INIT.... OUTPUT NAME INIT PRESET NAME INIT.... BANK NAME INIT.... BANK EDID INIT BASE EDID INIT CURRENT ROUTING STATE IS SAVED TO PRESET 1 CURRENT ROUTING STATE IS SAVED TO PRESET 2 CURRENT ROUTING STATE IS SAVED TO PRESET 3 CURRENT ROUTING STATE IS SAVED TO PRESET 4 CURRENT ROUTING STATE IS SAVED TO PRESET 5 CURRENT ROUTING STATE IS SAVED TO PRESET 6 CURRENT ROUTING STATE IS SAVED TO PRESET 7 CURRENT ROUTING STATE IS SAVED TO PRESET 8 IR CHANNEL IS SET TO CHANNEL 0 (DIP1=OFF, DIP2=OFF) ALL INPUTS HDCP ARE ENABLED ALL INPUTS ARE SET TO FST FAST MODE MATRIX EDID IS UNLOCKED MATRIX WILL REBOOT SHORTLY *REBOOT UNIT IN 2 SECONDS

#hdcp

The #hdcp command enables / disables HDCP detection on the selected input.

NOTE: Some computers will enable HDCP if an HDCP-compliant display is detected. Set *param2* = 1 to force the computer to ignore detection of an HDCP-compliant display. Setting *param2* = 0 does *not* decrypt HDCP content.

Syntax:

#hdcp param1 param2

Parameters:

| param1 param2 | Input Value | | [1 32] [0 1] |
|------------------|----------------|-------------|-----------------|
| | Value | Description | |
| | 0 | Disable | |
| | 1 | Enable | |
| | | | |

Example:

#hdcp 2 0
INPUT 2 HDCP IS DISABLED

#hdcp 2 1
INPUT 2 HDCP IS ENABLED

Commands

#help

The #help command displays the list of available RS-232 / Telnet commands. Help on a specific command can be displayed when using param1.

<u>Syntax</u>:

#help [param1]

Parameters:

param1

Command name (optional)

Examples:

#help

#IPCONFIG #RESETIP #SIPADD #SNETMASK #SGATEWAY #SHOW IP #SHOW NETMASK #SHOW GATEWAY #SHOW_MAC_ADDR #SET HTTP PORT #SHOW HTTP PORT #FST FAST #SHOW FST #STRTO IN

#help #sipadd

#SIPADD PARAM 1 SET THE IP ADDRESS PARAM 1 = XXX.XXX.XXX.XXX WHERE XXX: 0 - 255

#hdp_pulse

The <code>#hpd_pulse</code> command cycles the HPD line on the specified input. Issuing this command is identical to physically disconnecting and reconnecting the cable between the source and the matrix. If param1 = 0, then all inputs will receive the HPD pulse.

<u>Syntax</u>:

#hpd pulse param1

Parameters:

param1

Input

[1 ... 32]

Examples:

#hpd_pulse
HPD PULSE HAS BEEN SENT TO INPUT 1

#hpd_pulse 0
HPD PULSE HAS BEEN SENT TO ALL INPUTS

#lock_edid

The $\#lock_edid$ command secures the Local EDID by disabling the automatic loading of the downstream EDID when the matrix is powered.

<u>Syntax</u>:

#lock edid param1

Parameters:

| param1 | Value | | [0 1] |
|--------|-------|-------------|-------|
| | Value | Description | |
| | 0 | Disable | |
| | 1 | Enable | |

Examples:

#lock_edid 0
MATRIX EDID IS UNLOCKED

#lock_edid 1
MATRIX EDID IS LOCKED

#lock_matrix

The #lock_matrix command locks / unlocks the Matrix. When the matrix is locked, all functions are disabled including the front panel, RS-232, and Telnet

<u>Syntax</u>:

#lock matrix param1

Parameters:

param1

| Value | | [0 1] |
|-------|-------------|-------|
| Value | Description | |
| 0 | Unlock | |
| 1 | Lock | |

Examples:

#lock_matrix 0
MATRIX IS UNLOCKED

#lock_matrix 1
MATRIX IS LOCKED

#power

The *#power* command toggles power on the matrix.

Value

Syntax:

#power param1

Parameters:

param1

[0 ... 1]

| Value | Description |
|-------|-------------|
| 0 | Off |
| 1 | On |

Examples:

#power 0
(matrix will power-off)

#power 1

(matrix will power-on)

#reboot

The #reboot command reboots the matrix. Executing this command is the equivalent of disconnecting and reconnecting the AC power cord, on the back of the matrix. The matrix must be rebooted after changing the IP settings of the matrix.

Syntax:

#reboot

Parameters:

None

Example:

#reboot

MATRIX WILL REBOOT SHORTLY *REBOOT UNIT IN 2 SECONDS

GEF-HDFST-MOD-32432 v1.0G

MATRIX IS ON

OUT: 01 02 03 04 05 06 07 08 IN: 01 02 03 04 05 06 07 08

OUT: 09 10 11 12 13 14 15 16 IN: 09 10 11 12 13 14 15 16

OUT: 17 18 19 20 21 22 23 24 IN: 17 18 19 20 21 22 23 24

OUT: 25 26 27 28 29 30 31 32 IN: 25 26 27 28 29 30 31 32

OUT: 33 IN: 01

IP: 192.168.1.239 Netmask: 255.255.255.0 Gateway: 192.168.1.1

#set_edid

The #set_edid command sets the specified EDID type to an input or bank. Output 33, used by *param2*, is **HDMI Local Out**.

<u>Syntax</u>:

#set edid param1 param2 param3 param4

Parameters:

| param1 | Source | [STRING] |
|--------|---------|----------------------------|
| | Source | Description |
| | default | Uses default EDID |
| | dynamic | Uses dynamic EDID |
| | bank | Uses EDID bank |
| | output | Uses EDID on Output (sink) |
| param2 | Source | [0 33] |
| | | |
| | Source | Description |

| Source | Description |
|--------|--------------|
| 0 | Default EDID |
| 1 8 | EDID bank |
| 1 33 | Output |

param3

Target

[STRING]

| Target | Description |
|--------|------------------------|
| input | Specifies an input |
| bank | Specifies an EDID bank |

param4

Target

[1 ... 32]

| Value | Description |
|-------|-------------|
| 1 32 | Input |
| 1 8 | EDID bank |

(continued on next page)

Notes:

If param1 = default or param1 = dynamic, set param2 = 0.

Using Dynamic EDID

When *param1* = dynamic, the specified input will be set to *Dynamic EDID*. This can be observed by accessing the Manage EDID tab, in the Web interface. When an input is set to *Dynamic EDID*, the input will use the EDID of the last selected output during the routing process. The order in which outputs are routed are important when using *Dynamic EDID*. See the example below.

Examples:

Using Dynamic EDID:

#set_edid dynamic 0 input 4
COPY DYNAMIC EDID TO INPUT4.

In the example above, Input 4 is set to *Dynamic EDID*. If the following routing command is issued, then the EDID from Output 3 (not Output 2) will be used by Input 1.

r 4 2 3 INPUT 4 IS SET TO OUTPUTS 2, 3

However, if we wanted to use the EDID from Output 2, we would write the command as:

r 4 3 2 INPUT 4 IS SET TO OUTPUTS 3, 2

Since Output 2 was the last output that was specified, this will be the EDID that Input 4 will use.

This second example does not use Dynamic EDID but uses the EDID from the specified downstream sink (display, etc):

#set_edid output 1 input 3
COPY OUTPUT1 EDID TO INPUT3.

#set_ir

The $\texttt{#set_ir}$ command sets the IR channel for the matrix.

Syntax:

#set_ir param1

Parameters:

param1

[0 ... 3]

| Channel | Description |
|---------|------------------|
| 0 | Set IR channel 0 |
| 1 | Set IR channel 1 |
| 2 | Set IR channel 2 |
| 3 | Set IR channel 3 |

Example:

#set_ir 0

IR CHANNEL IS SET TO CHANNEL 0 (DIP1=OFF, DIP2=OFF)

Channel

#show_fw

The #show fw command displays the current version of matrix firmware.

Syntax:

#show_fw

Parameters:

None

Example:

#show fw

FIRMWARE VERSION = GEF-HDFST-MOD-32432 v1.0G

#show_hdcp

The #show hdcp command displays the HDCP status on the specified input.

Syntax:

#show_hdcp param1

Parameters:

param1

Input

[1 ... 32]

Example:

#show_hdcp 1

INPUT 1 HDCP IS ENABLED

Commands

[1 ... 33]

#show_hpd

The #show_hpd command displays the HPD status of the specified output. Output 33 is **HDMI Local Out**.

<u>Syntax</u>:

#show hpd param1

Parameters:

param1 Output <u>Example</u>: #show_hpd 4 HPD OF OUTPUT 4 (Output4) IS LOW

#show_ir

The #show ir command displays the IR channel of the matrix.

Syntax:

#show_ir

Parameters:

None

Example:

#show_ir

CURRENT IR CHANNEL IS: 0

#show_out_colordpt

The <code>#show_out_colordpt</code> command displays the highest color depth supported by the specified display based on the EDID. If no display is attached to the specified output, then the command will return NO SIGNAL. Output 33 is **HDMI Local Out**.

<u>Syntax</u>:

#show_out_colordpt param1

Parameters:

param1

Output

[1 ... 33]

Example:

#show_out_colordpt 17

12 BITS HDMI

#show_out_res

The #show_out_res command displays the highest resolution supported by the specified display based on the EDID. If no display is attached to the specified output, then the command will return NO SIGNAL. Output 33 is **HDMI Local Out**.

Syntax:

#show_out_res param1

Parameters:

param1

Output

[1 ... 33]

Example:

#show_out_res 25

1080P 60HZ HDMI

Commands

#show_r

The <code>#show_out_colordpt</code> command displays the current routing status of the specified output. Output 33 is HDMI Local Out.

<u>Syntax</u>:

#show_r param1

Parameters:

param1

Output

[1 ... 33]

Example:

#show r 9

OUTPUT 9(Output5) IS ROUTED TO INPUT 5(Input5)

#show_rsense

The #show_rsense command displays the RSENSE status of the specified output. Output 33 is **HDMI Local Out**.

Syntax:

#show rsense param1

Parameters:

param1

Output

[1 ... 32]

Example:

#show rsense 6

RSENSE OF OUTPUT 6 (Output6) IS HIGH

#show_ver_data

The #show ver data command displays the current software and hardware version.

Syntax:

#show_ver_data

Parameters:

None

Example:

#show_ver_data

SOFTWARE AND HARDWARE VERSION: v1.0G PCB-2026*A

m

The ${\tt m}$ command displays the current matrix routing status. Do not precede the ${\tt m}$ command with the "#" symbol.

<u>Syntax</u>:

m

Parameters:

None

Example:

m

ALL OUTPUTS ARE UNMASKED MATRIX IS UNLOCKED

n

The n command displays the routing status of the specified output. Do not precede the n command with the "#" symbol. If *param1* = 0, then the routing status for all outputs will be returned.

Syntax:

n paraml

Parameters:

None

Examples:

To see how this command works, we have already routed Input 2 to Outputs 4, 5, and 9. Now, we'll use the n command to query Output 4:

n 4 004I02

The feedback is abbreviated as: "O04I02" and is read as: "Output 04 Input 02"

We can also query all outputs by setting param1 = 0:

Web Interface

Using the built-in Web Server

Access the built-in Web interface by entering the IP address of the matrix that was specified in step 3 under IP / UDP Configuration. Once connected to the matrix, the login screen will be displayed.

| Username | Administrator - | |
|----------|-----------------|------------------------------|
| Password | •••• | |
| | | |
| Login | | |

| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

Username

Select the username from the drop-down list.

Options: Operator, Administrator

Administrator login provides unrestricted access to all features and settings. Operator login limits access to matrix routing, display information, and routing preset features.

Password

Enter the password for the associated username. The password can also be set using RS-232 or Telnet. See the <code>#set_webui_op_pass</code> and the <code>#set_webui_ad_pass</code> commands.

The Web GUI is divided into four main pages: **Main**, **I/O Setup**, **Manage EDID**, and **Configuration**. Each main page is represented by a tab at the top-most portion of the screen. The **Main**, **I/O Setup**, and **Manage EDID** pages have their own set of sub-tabs. Click on the desired tab / sub-tab to open the desired page.

NOTE: In order to view all four tabs at the top of the screen, the user must be logged in as "Administrator". If logged-in as "Operator", only the **Main** tab will be visible.

Main Routing

Log Out Click Log Out to terminate the current Web session are return to the login page. Power (On / Standby)

32

33-Local

1

1

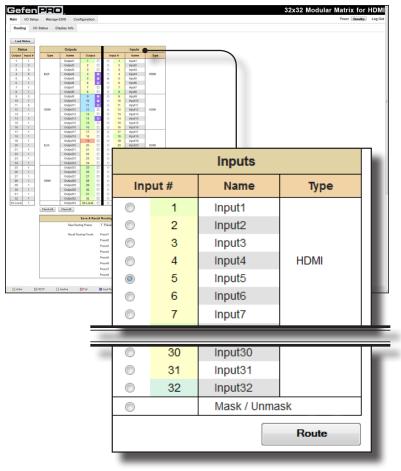

Click to toggle between power-on and standby mode.

33-Local

This output is used for local A/V monitoring and cannot be routed.

Input

Click the radio button next to the desired input to be routed. Only one input can be selected at a time.

Name

Displays the current name of the input.

Туре

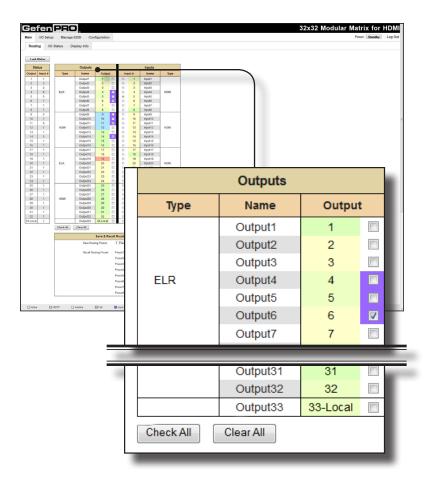

Indicates the type of card that is installed for the listed inputs.

Mask / Unmask

Click this radio button to enable / disable the selected input.

Route

Click the **Route** button to route the selected input to the select output(s).

Output

Click to place a check mark in the box and select the desired output. Multiple outputs can be selected. This includes the local A/V output (33-Local).

Name

Displays the current name of the output.

Туре

Indicates the type of card that is installed for the listed outputs.

Check All

Click this button to select all outputs.

Clear All

Click this button to clear (deselect) all selected outputs

Lock Matrix

Locks / unlocks the matrix. Once the matrix is locked, settings on the matrix cannot be changed using the front-panel buttons or through the Web GUI. When the matrix is locked, the button text will read "Unlock Matrix" and a red bar will appear across the top portion of the screen with the text "Matrix is LOCKED". Click the "Unlock Matrix" button to unlock the matrix.

Save Routing Preset

Saves the current routing state to memory. Click the drop-down list to select the desired routing preset. Click the **Save** button to save the preset to memory.

Recall Routing Preset

Loads the selected routing state into memory. Click the desired button to load the desired routing preset into memory.

Legend -

Provides color-coded information on the status of each Input and Output.

Active

Indicates that the Input / Output is active (connected to a source or a sink).

HDCP

Indicates that an HDCP source is being used on the input.

No input source or output (sink) is connected.

Fail

This error indicates that the source is unable to communicate with the display (sink) device.

Input Routing

Displays the current routing status of an input when a radio button, under the Input # column, is selected.

Main 🗆 I/O Status

Output

Displays the state of each output for each of the following: Name, RSENSE, Mask, HPD (Hot-Plug Detect), and HDCP.

Name

Displays the name of the output. The name of the output can be changed using the Web GUI (I/O Setup ► I/O Names) or using the #set_output_name command.

RSENSE

Displays the current Rsense state.

Mask

Displays the masking state of each output.

HPD

Displays the Hot-Plug Detect (HPD) state of each output.

HDCP

Indicates if HDCP-detection is enabled or disabled on each output.

NOTE: Because **Output 33** is reserved for source monitoring, only, the information for this input will remain undefined.

Choose EDID

Select the EDID from the drop-down list. The selected EDID will be copied from the selected EDID Bank or Output to the desired input(s) and used by the source.

Options:

Default EDID, Bank 1 ... Bank 8, Output 1 ... Output 32, 33-Local

Feature / Audio Formats

Displays the capabilities of the display (or sink device), based on the EDID.

FST

Click to select / deselect the desired input(s). Inputs with a check mark will enable the FST feature. FST is enabled by default. Use the **Set** button to save changes.

Check All

Places a check mark in each box under the FST column.

Clear All

Clears all check marks from the FST column.

Set

Click this button to save changes for all input(s). The Web GUI will display a prompt to verify the selected operation.

Cancel

Cancels the current operation and ignores changes for each input, if a change was made.

i

I/O Setup HDCP

NOTE: Some computers will enable HDCP if an HDCP-compliant display is detected. Use the Disable feature to force the computer to ignore detection of an HDCP-compliant display. The Disable feature does <u>not</u> decrypt HDCP content.

Card Removal and Installation

Although each 32x32 Modular Matrix for HDMI w/ HDCP is sold pre-configured, both input and output cards can be removed or added to fit the needs of the application. Each module can easily be removed and installed without using any special tools.

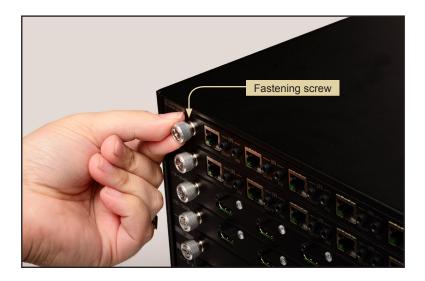

WARNING: Modules are sensitive to Electrostatic Discharge (ESD) which can damage the module. Avoid touching the module contacts or the components on the module. Always hold modules by the edges or by the knobs on the front of the module. Never slide a module over any surface. When installing/replacing modules, do not install an input module in to an output slot or an output module to an input slot. This will damage the matrix and void the warranty.

- 1. Power-off the matrix.
- 2. Turn the matrix around so that you are facing the back of the unit.

STOP: Before installing modules and prevent the risk of possible electrical shock, disconnect the AC power cord from the matrix.

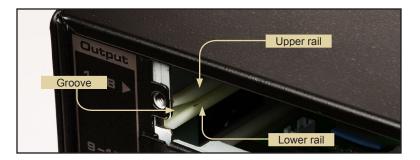

3. Loosen the fastening screws on both sides of the card (or cover plate) to be removed. Each card / cover plate has two fastening screws.

4. Grab the fastening screws on both sides of the card, between the thumb and index finger, and gently pull to remove the card from the matrix. If a cover plate is being removed, then loosen the fastening screws on both sides of the cover plate and gently remove the cover plate.

5. Locate the grooved metal track on either side of the expansion bay.

6. Carefully position the card between the upper and lower rail on each track.

- 7. Position either hand on both sides of the matrix and firmly push the card with both thumbs until it snaps in place.

8. Secure the card by hand-tightening the fastening screws. Do not overtighten the screws. To prevent damage to the screws, do not use pliers or other high-torque devices.

Power Supply Failure and Replacement

Power Supply Failure

The 32x32 Modular Matrix for HDMI w/ HDCP comes with two internal (hot-swappable) power supplies. If one of these power supplies should fail, a high-pitched alarm will sound from the matrix. POWER SUPPLY FAILURE! will appear in the front panel display. The matrix can function with a single power supply. However, the POWER SUPPLY FAILURE! message will be displayed instead of the *home screen*, until the power supply is replaced.

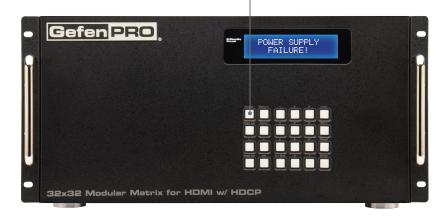

If the Web interface is being used, then the following message will appear on the page:

| Con | figuration | FAILURE: Power | Supply Failure | l. |
|-----------|------------|----------------|----------------|------|
| fo | | | | |
| outs | | | Inputs | |
| ne Output | | Input # | Name | Туре |

If the matrix is being controlled using RS-232 or Telnet, the POWER SUPPLY FAILURE! message will appear within the terminal application.

Power

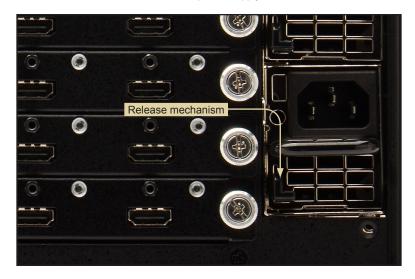

Press the Power button to cancel the alarm.

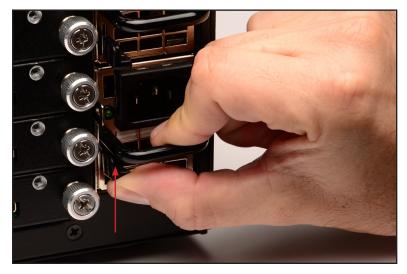

page | 125

Power Supply Replacement

- 1. Press the **Power** button to cancel the alarm. It is not necessary to power-off the matrix when replacing a power supply.
- 2. Locate the release mechanism on the power supply to be removed.

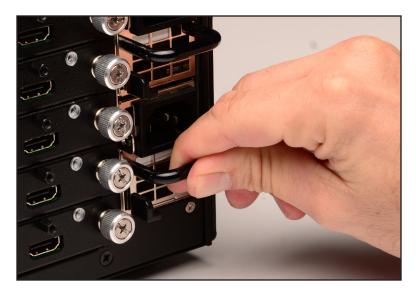

3. Grab the power supply handle and release mechanism between the thumb and index finger and squeeze. The release mechanism will move in an upward direction.

- 4. Gently pull the power supply as you continue to hold the release mechanism.
- 5. Once the power supply is released, pull the handle to remove the power supply.

- 6. Gently push the new power supply into place. The power supply will snap into place once it is fully installed.
- 7. Check that power supply is secured by pulling on the handle. The power supply should not move without using the release mechanism.

Firmware Upgrade Procedure

Upgrading using the Web interface

IMPORTANT: DO NOT power-off or disconnect the AC power cord from the matrix, at any time, during the firmware upgrade process.

- 1. Download the firmware update from the Support section of the Gefen Web site.
- 2. Extract the firmware file from the .ZIP file.
- 3. Power-ON the 32x32 Modular Matrix for HDMI w/ HDCP.
- 4. Connect an Ethernet cable between the matrix and the computer running the Web interface.

It is unnecessary to disconnect any cables or extenders from the 32x32 Modular Matrix for HDMI w/ HDCP during the update process.

- 5. Click the **Configuration** tab in the Web interface and click the **Browse...** button under the **System Configuration** section.
- 6. Select the firmware file and click the **Update** button.
- The matrix will display a prompt to verify that the current firmware will be overwritten. Click the **OK** button on the dialog box to begin uploading the firmware file.
- 8. Once the firmware file has been uploaded, the matrix will verify the firmware content. The front-panel display will display the following if the firmware passes:

9. After the firmware file integrity has been verified, the matrix will begin the upgrade procedure. The upgrade progress will be displayed in the front-panel display.

10. After the matrix has been updated, the unit will automatically initiate a countdown to reboot. The Power button can be pressed to bypass the countdown without harming the upgrade process. The display will display the following message:

11. After the matrix reboots, the firmware upgrade process will be complete.

Upgrading using USB

IMPORTANT: DO NOT power-off or disconnect the AC power cord from the matrix, at any time, during the firmware upgrade process.

- 1. Download the firmware update from the Support section of the Gefen Web site.
- 2. Power-ON the 32x32 Modular Matrix for HDMI w/ HDCP.
- Connect a USB cable between the computer and the 32x32 Modular Matrix for HDMI w/ HDCP.

It is unnecessary to disconnect any cables or extenders from the 32x32 Modular Matrix for HDMI w/ HDCP during the update process.

- 4. Once the computer is able to connect to the 32x32 Modular Matrix for HDMI w/ HDCP, a Removable disk icon will be displayed under My Computer.
- 5. Extract the firmware file from the .ZIP file and drag the .bin file to the Removable Disk.
- 6. Disconnect the USB cable from the computer.
- 7. The matrix will verify the firmware content. The front-panel display will show the following if the firmware passes.

8. After the firmware file integrity has been verified, the matrix will begin the upgrade procedure. The upgrade progress will be displayed in the front-panel display.

 After the matrix has been updated, the unit will automatically initiate a countdown to reboot. The **Power** button can be pressed to bypass the countdown without harming the upgrade process.

10. After the matrix reboots, the firmware upgrade process will be complete.

Specifications

| Supported Formats | | | | |
|--------------------|--|--|--|--|
| Resolutions (max.) | 1920 x 1200 (WUXGA) 1080p Full HD | | | |

| Electrical | |
|---------------------|------------|
| Maximum Pixel Clock | • 225 MHz |
| Input Video Signal | • 1.2V p-p |

| Connectors | |
|---|---|
| Inputs (32 x max.) (Organized into up to 4 banks of 8 each) | HDMI Type-A, 19-pin, female |
| Outputs (32 x max.) (Organized into up to 4 banks of 8 each) | HDMI Type-A, 19-pin, female ELR-POL, RJ-45 |
| RS-232 | • 1 x DB-9, female |
| Ethernet | • RJ-45 (100BaseT) |

| Operational | |
|-------------------|----------------------------|
| Power Input | • 2 x 100 - 240V AC |
| Power Consumption | • 750W (each power supply) |

| Physical | |
|------------------------|--|
| Dimensions (W x H x D) | 17.5" x 7" x 15" (443mm x 178mm x 381mm) |
| Unit Weight | • 18 lbs (8.16 kg) |

Stretch it, Switch it, Split it, Control it. Gefen's got it. ®
