

PORTABLE PA SYSTEM STAGEPAS 600i

Owner's Manual

Introduction

Thank you and congratulations on your purchase of the Yamaha STAGEPAS 600i Portable PA System. The STAGEPAS 600i is an all-in-one PA system, consisting of two speakers and a powered mixer. In order to get the most out of your new STAGEPAS 600i and its sophisticated functions, we suggest you read through this manual thoroughly. Also keep it in a safe place for future reference.

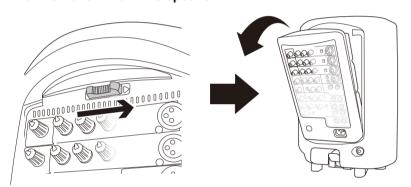

Main Features

- 600 watts power amplifier for versatility in a wide variety of performance applications.
- 10-inch two-way bass-reflex type speakers for high-quality, powerful sound.
- 10-channel mixer features four mono mic/line and three stereo line input channels to support a wide
- Yamaha's high-quality SPX reverb, providing optimum processing for instruments or vocals.
- Feedback Suppressor, which automatically cuts and prevents undesirable feedback noise.
- USB connector for convenient digital connection with an iPod/iPhone, and allows charging of the device.
- Independent three-band equalizer on each channel for tonal adjustment and sound control.

QuickStartGuide

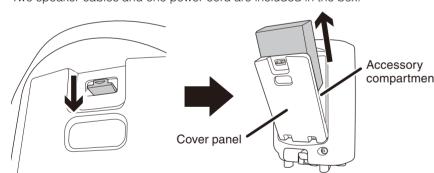

Connecting the speakers and the mixer

1 Slide the mixer's lock in the direction of the arrow (shown below), and then remove it from the speaker.

Open the cover panel attached to the other speaker, and then remove the box from inside the accessory compartment.

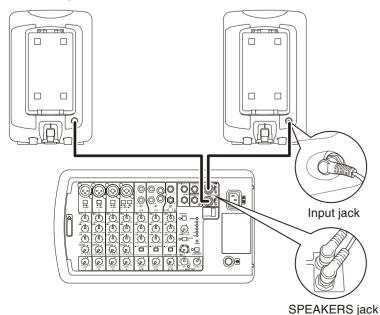

Two speaker cables and one power cord are included in the box.

NOTE After the box is removed, loose items, such as the included power cord, speaker cables, owner's manual (this booklet), and an optional microphone can conveniently be stored in the accessory

3 Connect the speakers and the mixer.

Connect the mixer's SPEAKERS jack to the speakers' input jack using the included speaker cables. As shown in the illustration below, make sure to insert the speaker cables all the way inside until secure.

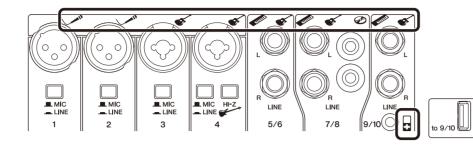

Caution

Use only the included speaker cables. Use of other cables may result in heat generation, or short

Connecting microphones, instruments, and audio devices to the mixer

4 Connect desired devices, such as a microphone, or an instrument to the input jack of the mixer.

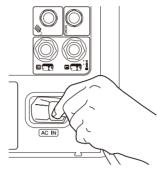

Refer to the illustration on the mixer shown below or the connection example of the cover panel of the accessory compartment.

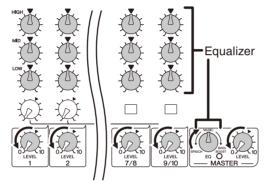

Getting sound out of the system

5 Connect the included power cord.

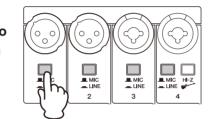

First, connect it to the mixer's AC IN connector, then to a power outlet

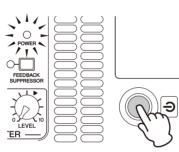

Turn the mixer's LEVEL controls (white knobs) and MASTER LEVEL control (red knob) to the minimum (zero). Also, set the equalizer controls (green knobs) to the center "▼" or "MUSIC" position.

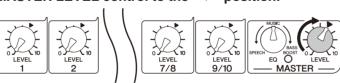

Set the MIC/LINE switch to the MIC (1) position for microphone connection, and to the LINE (_) position for connection of an instrument or audio device.

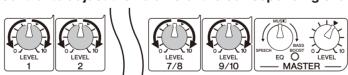

8 Turn on the power of the connected sound source (if applicable), then the mixer. The POWER LED lights.

Set the MASTER LEVEL control to the "▼" position

10 While playing your instrument or singing into the microphone, use the LEVEL control to adjust the volume of the corresponding channel

11 Use the MASTER LEVEL control to adjust the overall volume.

If you hear the sound and the volume seems appropriate, setup is complete. If not, please refer to the check list in the "Troubleshooting" section on the back of this booklet.

NOTE To avoid any loud, unexpected noise from the speaker, first turn off the power to the mixer, then the connected sound source (such as an instrument or audio device).

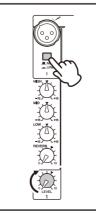

Making optimum volume settings

When the volume is too loud

Turn the LEVEL control to the minimum (zero). Set the MIC/LINE switch to the LINE (__) position, then slowly raise the LEVEL control until the desired volume is reached.

When the volume is too soft

Turn the LEVEL control to the minimum (zero). Set the MIC/LINE switch to the MIC (**L**) position, then slowly raise the LEVEL control until the desired volume is reached.

Applying Reverb

The STAGEPAS 600i features a built-in reverb processor that is in the same league as our famed SPX effect processor series. This reverb lets you simulate the acoustics of different performance environments, such as concert halls and small clubs, and add warm, natural ambience to your vocals or instrument performance.

1 Press down the REVERB switch to turn it on.

The LED lights when REVERB is on.

2 Position the REVERB TYPE/TIME control to the desired reverb type and time (length).

Turning the control toward the right lengthens the time of the selected reverb type

3 Use the REVERB control to adjust the reverb amount of the corresponding

If necessary, repeat steps 2 and 3 to determine the optimum reverb setting

6 MONITOR OUT jacks

These are for connection to a powered speaker for monitoring purposes, and output a mix of the signals from channels 1 to 9/10. You can adjust the output level using the MONITOR OUT control (11). If only the L (MONO) jack is used, the signals from the L and R channels are mixed and output.

6 SUBWOOFER OUT jack

This is for connection to a powered subwoofer, and outputs a mono signal. If this jack is in use, the low frequencies below 120Hz to the SPEAKERS L/R jacks will be cut. The output level is linked to that of the MASTER LEVEL control (22).

7 REVERB FOOT SW jack

This is for connection to an unlatchedtype footswitch such as the Yamaha FC5—useful for solo performers, since you can toggle the reverb on and off as needed with your foot.

SPEAKERS L/R jacks

stereo-mini

Use the included speaker cables to connect the speakers.

9 USB connector

Connect your iPod/iPhone using a USB cable to play music and charge the iPod/iPhone. Use the LEVEL control of channels 9/10 to adjust the volume, since the music signals are mixed to those channels. This connector supplies 5V power to the connected USB device. This connector does not support digital playback from USB devices other than the iPod/iPhone. For playback of such devices, use appropriate stereo mini or RCA pin connectors.

∠!\ Caution

Use a genuine Apple Dock Connector
USB Cable for the iPod/iPhone

· Please do not use a USB hub.

NOTE If you connect an iPhone, incoming calls or emails may cause a notification sound to be output. In order to prevent this, we recommend setting the iPhone's Airplane mode to "on."

Mixer Controls and Functions

Mic/Line input jacks (channels 1-4)

Connect microphones, guitars, electronic musical instruments or audio equipment. Channels 3 and 4 provide combo jacks that support both XLR and phone plugs.

For low-level signals (including microphones), set the switch to the MIC () position. For high-level signals (including electronic instruments and audio equipment), set the switch to the LINE (_) position.

This switch is used when connecting a device directly to the mixer without a DI (direct box)—for example, instruments with passive pickups, such as an acoustic-electric guitar or electric bass without battery. This function is effective only for the phone jack input.

4 Line (stereo) input jacks (channels 5/6, 7/8, 9/10)

Connect line-level devices such as electronic instruments, acoustic-electric guitars, CD players, and portable audio players. These jacks support phone, RCA-pin, and stereo-mini

connected to another jack will be muted. The music signals from iPod/iPhone (9) are always mixed to channels 9/10.

10 PHANTOM (CH1/2) switch /LED

When this switch is on, the LED lights indicating that phantom power is available for channels 1 and 2. Turn this switch on to supply power to condenser microphones or a DI (direct box)

!\ Caution

Follow the important precautions below, in order to prevent noise and possible damage to external devices and the unit when you operate this switch.

- Be sure to leave this switch off if you do not need phantom power, or when you connect a device that does not support phantom power to channels 1 or 2.
- Do not connect/disconnect a cable to/from channels 1 and 2 while this switch on.
- Turn the LEVEL control of the channels 1 and 2 to the minimum before operating this switch

10 MONITOR OUT control

Determines the signal level output from the MONITOR OUT jacks (5). The MASTER LEVEL control does not affect the MONITOR OUT signal.

Equalizer controls (HIGH, MID, LOW)

This three-band equalizer adjusts the channel's high, mid, and low frequency bands. Setting the control to the "▼" position produces a flat response in the corresponding band. Turning the control clockwise boosts the selected band. If you start getting feedback, turn the control back slightly.

® REVERB switch/LED

When this switch is on, the LED lights indicating that you can apply reverb. This switch is off when you turn on the mixer. (Unlike other switches, this switch cannot be locked.)

REVERB TYPE/TIME control

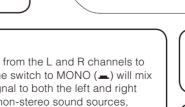

Determines the reverb type and its length. Turning the control toward the right lengthens the time of the selected reverb type. **HALL:** Simulated reverb of a large space, such as a concert

PLATE: Simulated metal plate reverb, producing a more hardedged and bright sound.

ROOM: Simulated acoustic ambience of a small room. **ECHO:** Echo effect suitable for vocals.

® REVERB controls (channels 1-4)

Determines the amount of reverb for each channel when the REVERB switch (13) is on.

6 ST/MONO switches (channels 5/6, 7/8, 9/10)

Setting the switch to ST (STEREO) (\blacksquare) will assign the signals from the L and R channels to each left and right speaker and output each signal. Setting the switch to MONO (__) will mix the output of different L and R sources to output the same signal to both the left and right speakers. For keyboards with mono output, guitars, or other non-stereo sound sources, when the switch is set to MONO, the stereo jacks can be conveniently used as multiple

The LEVEL meter shows the level of output signal from the SPEAKERS L/R jacks.

Caution

If used at a high volume so that the LIMITER LED flashes continuously, the internal power amplifier section is being excessively overloaded and may malfunction. Reduce the output level with the MASTER LEVEL control so that the indicator flashes only briefly on the highest transient

13 POWER LED

This LED lights when the power is turned on by pressing the power switch.

® FEEDBACK SUPPRESSOR switch/LED

When this switch is on, the LED lights indicating that feedback is automatically suppressed. (This utilizes a seven-band notch filter. When this switch or the power switch is off, the notch filter will be reset.)

Use these controls to adjust the volume for each channel. To reduce noise, set any LEVEL controls on

MASTER EQ (equalizer) control

Use this control to adjust the overall sound frequency balance. The center position "MUSIC" is a basic setting and if you turn the control counterclockwise, this creates an optimum setting for speech, cutting unneeded low range frequencies. If you turn the control clockwise, it creates an optimum setting for playback of sound sources, since the low range is boosted. If you turn the control clockwise further, the LED lights indicating that the bass boost function turns on, giving you even more powerful bass tone.

MASTER LEVEL control

Determines the volume of the signal output from the SPEAKERS L/R jacks. This allows you to adjust the overall volume without changing the relative volume balance among the various channels.

Wents

These are the vents for the cooling fan inside the mixer. Do not block the vents when in use.

② AC IN jack

Connect the included power cord here

② ∪ (power) switch

For turning the power of the mixer on (__) and off (__).

Rapidly turning the unit on and off in succession may cause it to malfunction. After turning the unit off, wait for

about 5 seconds before turning it on again.

Troubleshooting

Power does not turn on.

□ Did you firmly and securely connect the

Power shuts down suddenly.

□ Are the vents of the mixer blocked? Since inadequate ventilation can result in overheating the mixer, the power may be turned off automatically to protect from overheating. Secure the ventilation for

cooling, then turn on the power again.

No sound is heard.

- ☐ Did you connect the mixer's SPEAKERS jacks and the speakers' input jacks using the proper speaker cables?
- □ Did you firmly and securely connect the speaker cables?
- ☐ Is a speaker other than the included speaker (MODEL 600S) connected to the mixer's SPEAKERS jacks? Please connect the included speaker (MODEL 600S).
- □ Did you use the included speaker cables?

If you use a commercially-available speaker cable with a metal-housing connector, the cable will be shorted when the connector touches other metal, resulting in no sound being produced.

- ☐ Is the POWER LED flashing at intervals? There may be a short in the speaker cable or the connection may be faulty. Check that the speaker cable is not scratched and is connected properly to the mixer, then reapply the power.
- ☐ For channels 7/8, are both phone and RCA-pin jacks connected at the same time? Or, for channels 9/10, are both phone and stereo mini jacks connected at the same time?

The phone jack has priority for channels 7/8 and the stereo mini jack has priority for

☐ Is the POWER LED flashing continuously?

If the internal power amplifier section is excessively overloaded, the amplifier will be muted for protection. The mixer will automatically reset itself after a while.

PRECAUTIONS

PLEASE READ CAREFULLY BEFORE PROCEEDING

* Please keep this manual in a safe place for future reference.

⚠ WARNING

Always follow the basic precautions listed below to avoid the possibility of serious injury or even death from electrical shock, short-circuiting, damages, fire or other hazards. These precautions include, but are not limited to, the following:

Power supply/Power cord Do not place the power cord near heat sources such as heaters or radiators, and do not excessively bend or otherwise damage the cord, place heavy objects on it, or place it in a position where anyone could

voltage is printed on the name plate of the mixer. Use only the supplied power cord.

walk on, trip over, or roll anything over it.

may have accumulated on it.

- If you intend to use the device in an area other than in the one you purchased, the included power cord may not be compatible. Please
- check with your Yamaha dealer Check the electric plug periodically and remove any dirt or dust which

Only use the voltage specified as correct for the mixer. The required

 Be sure to connect to an appropriate outlet with a protective grounding connection. Improper grounding can result in electrical shock.

 This device contains no user-serviceable parts. Do not open the device or attempt to disassemble the internal parts or modify them in any way If it should annear to be malfunctioning, discontinue use immediately and have it inspected by qualified Yamaha service personnel.

Do not open

Water warning

• Do not expose the device to rain, use it near water or in damp or wet conditions, or place on it any containers (such as vases, bottles or glasses) containing liquids which might spill into any openings. If any liquid such as water seeps into the device, turn off the power immediately and unplug the power cord from the AC outlet. Then have the device inspected by qualified Yamaha service personnel.

Never insert or remove an electric plug with wet hands.

Fire warning

 Do not put burning items, such as candles, on the unit. A burning item may fall over and cause a fire.

If you notice any abnormality

- When one of the following problems occur, immediately turn off the power switch and disconnect the electric plug from the outlet. Then have the device inspected by Yamaha service person
 - The power cord or plug becomes fraved or damaged It emits unusual smells or smoke.
 - Some object has been dropped into the instrument.
- There is a sudden loss of sound during use of the device. • If this mixer should be dropped or damaged, immediately turn off the power switch, disconnect the electric plug from the outlet, and have the

device inspected by qualified Yamaha service personnel.

∴ CAUTION

Always follow the basic precautions listed below to avoid the possibility of physical injury to you or others, or damage to the device or other property. These precautions include, but are not limited to, the following:

Power supply/Power cord

- When removing the electric plug from the device or an outlet, always hold the plug itself and not the cord. Pulling by the cord can damage it
- Remove the electric plug from the outlet when the device is not to be used for extended periods of time, or during electrical storms

Location

Notice

- Do not place the device in an unstable position. Unless the device is securely affixed, do not install it in a location where it might fall, even if the surface is level
- Do not block the vents. This mixer has ventilation holes at the top and sides to prevent the internal temperature from becoming too high. In particular, do not place the mixer on its side or upside down Inadequate ventilation can result in overheating, possibly causing damage to the mixer, or even fire

sure that there is adequate space between the mixer, or the speaker fitted with the mixer, and surrounding walls or other devices: at least 30cm at the sides, 30cm behind and 30cm above, Inadequate ventilation can result in overheating, possibly causing damage to the device(s), or even fire,

Do not use the device in a confined, poorly-ventilated location. Make

- If you lay the speaker flat on its side or like a stage monitor, make sure to remove the mixer first.
- Do not hold the bottom of the speaker when transporting or moving it. In doing so, you may pinch your hands under the speaker, and result in
- . Do not place the device in a location where it may come into contact
- with corrosive gases or salt air. Doing so may result in malfunction. · Before moving the device, remove all connected cables
- When setting up the mixer, make sure that the AC outlet you are using is easily accessible. If some trouble or malfunction occurs, immediately turn off the power switch and disconnect the plug from the outlet. Even when the power switch is turned off, electricity is still flowing to the product at the minimum level. When you are not using the product for a long time, make sure to unplug the power cord from the wall AC outlet.

- Before connecting the device to other devices, turn off the power for all devices. Before turning the power on or off for all devices, set all volume levels to minimum
- For the SPEAKERS tacks of the mixer, use only the included MODEL 600S speakers and speaker cables. Use of other types of speakers and cables may result in damage, or even fire

Maintenance

· Remove the power plug from the AC outlet when cleaning the device

Handling caution

- Do not insert your fingers or hands in any gaps or openings on the vents or panel of the mixer and the ports of the speaker
- Avoid inserting or dropping foreign objects (paper, plastic, metal, etc.) into any gaps or openings on the vents or panel of the mixer and the ports of the speaker. If this happens, turn off the power immediately and unplug the power cord from the AC outlet. Then have the device inspected by qualified Yamaha service personnel
- . Do not rest your weight on the device or place heavy objects on it, and avoid use excessive force on the buttons, switches or connectors.
- Do not use the speakers for a long period of time at a high or uncomfortable volume level, since this can cause permanent hearing loss. If you experience any hearing loss or ringing in the ears, consult a
- Do not operate the device if the sound is distorting. Prolonged use in this condition could cause overheating and result in fire.
- Do not pull on any attached cable, such that of a microphone. Doing so may cause the speaker to topple, and result in damage or in injury.

Yamaha cannot be held responsible for damage caused by improper

use or modifications to the device, or data that is lost or destroyed.

· Interference from cell phones

To avoid the possibility of malfunction or damage to the product, follow the notices below.

■ Handling and Maintenance

- Do not expose the device to excessive dust or vibration, or extreme cold or heat (such as in direct sunlight, near a heater, or in a car during the day), in order to prevent the possibility of panel disfiguration, unstable operation, or damage to the internal component • Do not place vinyl, plastic or rubber objects on the device, since this
- might discolor the panel.
- When cleaning the device, use a dry and soft cloth. Do not use paint thinners, solvents, cleaning fluids, or chemical-impregnated wiping
- · Condensation can occur in the device due to rapid, drastic changes in ambient temperature—when the device is moved from one location to another, or air conditioning is turned on or off, for example. Using the device while condensation is present can cause damage. If there is reason to believe that condensation might have occurred, leave the device for several hours without turning on the power until the condensation has completely dried out.
- Avoid setting all equalizer controls and LEVEL knobs to their maximum Depending on the condition of the connected devices, doing so may cause feedback and may damage the speakers.
- When turning on the AC power in your audio system, always turn or the mixer LAST, to avoid speaker damage due to the noise. When turning the power off, the mixer should be turned off FIRST for the same

Old Equipment

All full-range loudspeakers are fitted with a self-resetting poly switch that protects the high-frequency driver from damage caused by excessive power. If a loudspeaker cabinet loses high-frequency output, mmediately remove power from the unit and wait for two to three minutes. This should be long enough to allow the poly switch to reset. Reapply power and check the performance of the highfrequency driver before continuing, with the power reduced to a level that does not cause the poly switch to interrupt the signal.
